ANNAMACHARYA UNIVERSITY

(ESTD UNDER AP PRIVATE UNIVERSITIES (ESTABLISHMENT AND REGULATION) ACT, 2016)
(UNIVERSITY LISTED IN UGC AS PER THE SECTION 2(f) OF THE UGC ACT, 1956)

RAJAMPET, Annamayya District, AP – 516126, INDIA

Title of the Course: Artificial Intelligence
Category: PC
Course Code: 24ACSE51T
Year: III B. Tech
Semester: I Semester
Branch: Common to CSE, CSE(DS), CSE (IOTCSBCT)

Lecture Hours	Tutorial Hours	Practice Hours	Credits	Total Hours
3	-	-	3	52

Course Objectives: This course is designed to:

1. Understand fundamentals of AI, agents, and environments
2. Apply search strategies and problem-solving techniques
3. Analyze and represent knowledge using logic and planning methods
4. Evaluate reinforcement learning and NLP techniques
5. Create intelligent solutions using robotics, vision, and ethical AI concepts

Course Outcomes:

1. Explain AI concepts, history, and agent structures
2. Implement uninformed and informed search algorithms
3. Apply propositional and first-order logic for problem solving
4. Analyze RL models and NLP applications
5. Design AI-based systems in robotics and computer vision with ethical considerations.

Unit 1 Introduction

10

Introduction: What is AI, Foundations of AI, History of AI, The State of Art

Intelligent Agents: Agents and Environments, Good Behaviour: The Concept of Rationality, The Nature of Environments, The Structure of Agents

Unit 2 Solving Problems by searching

10

Problem Solving Agents, Example problems, Searching for Solutions, Uninformed Search Strategies, Informed search strategies, Heuristic Functions, Beyond Classical Search: Local Search Algorithms and Optimization Problems, Local Search in Continuous Spaces, Searching with Nondeterministic Actions, Searching with partial observations, online search agents and unknown environments.

Unit 3 Knowledge Representation and Planning

12

Knowledge-Based Agents and the Wumpus World, Propositional Logic: Syntax, Semantics, and Theorem Proving, Agents based on Propositional Logic and Model Checking, First-Order Logic: Syntax, Semantics, and Inference Mechanisms, Unification, Forward and Backward Chaining, and Resolution, Knowledge Engineering and Ontological Representation, Introduction to Classical Planning and Planning Algorithm.

Unit 4 Reinforcement Learning & Natural Language Processing**8**

Reinforcement Learning: Introduction, Passive Reinforcement Learning, Active Reinforcement Learning, Generalization in Reinforcement Learning, Policy Search, applications of RL Natural Language Processing: Language Models, Text Classification, Information Retrieval, Information Extraction.

Unit 5 Robotics and Computer Vision**12**

Robotics: Introduction, Robot Hardware, Robotic Perception, planning to move, planning uncertain movements, Moving, Robotic software architectures, application domains.

Philosophical foundations: The Limits of AI, Can Machines Really Think? The Ethics of AI.

ANNAMACHARYA UNIVERSITY

(ESTD UNDER AP PRIVATE UNIVERSITIES (ESTABLISHMENT AND REGULATION) ACT, 2016)

(UNIVERSITY LISTED IN UGC AS PER THE SECTION 2(f) OF THE UGC ACT, 1956)

RAJAMPET, Annamayya District, AP – 516126, INDIA

Title of the Course	:	Computer Networks
Category	:	PC
Couse Code	:	24ACSE52T
Year	:	III B. Tech
Semester	:	I Semester
Branch	:	Common to CSE, AI&DS, AIML,CSE(AI),CSE(DS),CSE(AIML),CSE(IOTBSCT)

Lecture Hours	Tutorial Hours	Practice Hours	Credits	Total Hours
3	-	-	3	52

Course Objectives: This course is designed to

1. Understand the protocol layering and physical level communication.
2. Analyze the performance of a network.
3. Describe the functions of network layer and the various routing protocols
4. Familiarize the functions and protocols of the Transport layer.
5. Understand the working of various Application Layer Protocols.

Course Outcomes:

After completion of the course, students will be able to

1. Explain protocol layering, OSI/TCP-IP models, and physical layer communication.
2. Analyze network performance using metrics like throughput and delay.
3. Apply network layer functions and routing protocols.
4. Explain transport layer functions and differentiate TCP and UDP.
5. Illustrate the working of application layer protocols such as DNS and HTTP.

Unit 1 Introduction to Physical Layer

10

Network hardware, Network software, OSI, TCP/IP Reference models, Example Networks: ARPANET, Internet. Physical Layer: Guided Transmission media: twisted pairs, coaxial cable, fiber optics, Wireless transmission.

Unit 2 Data Link Layer

12

Data link layer: Design issues, framing, Error detection and correction. Elementary data link protocols: simplex protocol, A simplex stop and wait protocol for an error-free channel, A simplex stop and wait protocol for noisy channel. Sliding Window protocols: A one-bit sliding window protocol, A protocol using Go-Back-N, A protocol using Selective Repeat, Example data link protocols. Medium Access sub layer: The channel allocation problem, Multiple access protocols: ALOHA, Carrier sense multiple access protocols, collision free protocols.

Unit 3 Network Layer

10

Design issues, Routing algorithms: shortest path routing, Flooding, Hierarchical routing, Broadcast, Multicast, distance vector routing, Congestion Control Algorithms, Quality of Service, Internetworking, The Network layer in the internet.

Unit 4 Transport Layer

10

Transport Services, Elements of Transport protocols, Connection management, TCP and UDP protocol: RTP, RTTP

Unit 5 The Application Layer

10

Domain name system, SNMP, Electronic Mail; the World WEB, HTTP, Streaming audio and video.

Title of the Course	:	Data Mining
Category	:	PC
Couse Code	:	24ACSE53T
Year	:	III B. Tech
Semester	:	I Semester
Branch	:	Common to CSE , AI&DS, CSE(DS), CSE(AIML),

Lecture Hours	Tutorial Hours	Practice Hours	Credits	Total Hours
3	-	-	3	54

Course Objectives: This course is designed to

1. Explain the fundamentals of data mining, data preprocessing techniques, and key issues in data mining.
2. Describe data warehousing concepts and association rule mining techniques for large datasets
3. Apply classification and prediction techniques for analyzing data.
4. Analyze different clustering methods and outlier detection techniques for data analysis.
5. Evaluate the effectiveness of data mining techniques using the ORANGE tool on real-world datasets

Course Outcome: Upon completion of the course, the students should be able to:

1. Describe data mining functionalities and perform basic data preprocessing operations.
2. Apply data warehouse models and association rule mining techniques to extract patterns.
3. Analyze and compare classification and prediction techniques based on performance.
4. Evaluate clustering algorithms and identify suitable methods for different data types.
5. Develop data mining models and infer knowledge from datasets using the ORANGE tool.

Unit 1

12

INTRODUCTION: Fundamentals of data mining, Data Mining Functionalities, Classification of Data Mining systems, Data Mining Task Primitives, Major issues in Data Mining, Data Preprocessing: Needs Preprocessing the Data, Data Cleaning, Data Integration and Transformation, Data Reduction, Discretization and Concept Hierarchy Generation.

Unit 2

10

Warehousing: Data Warehouse and OLAP Technology for Data Mining Data Warehouse, Multidimensional Data Model, Data Warehouse Architecture
Mining Association Rules In Large Databases: Basic Concepts and a Road Map, Efficient and Scalable Frequent Item set Mining Methods, Mining Various Kinds of Association Rules, From Association Mining to Correlation Analysis.

Unit 3

10

Classification And Prediction: Issues Regarding Classification and Prediction, Classification by Decision Tree Induction, Bayesian Classification, Classification by Back propagation, Support Vector Machines, Other Classification Methods, Prediction, Classifier Accuracy.

Unit 4

12

Cluster Analysis :Types of Data in Cluster Analysis, A Categorization of Major Clustering Methods, Partitioning Methods, Hierarchical Methods Density-Based Methods, Grid-Based Methods, Model- Based Clustering Methods, Outlier Analysis.

Unit 5**10**

Orange Data Mining Tool: Introduction to Orange, Datasets – Introduction, Iris plants database, CSV File Import, Transform, Association Rule Mining, Decision Tree, KNN, Naïve Bayes, Linear Regression, Clustering algorithms.

Lecture Hours	Tutorial Hours	Practice Hours	Credits	Total Hours
3	-	-	3	52

Course Objectives: This course is designed to

1. To understand the fundamental concepts of software testing, including software testing objectives, the taxonomy of bugs
2. To analyze testing techniques such as path testing and transaction flow testing
3. To understand the concepts of data flow testing and its applications
4. To build the paths and decision tables for a software project
5. To apply the concepts of State Graphs, Transition testing and Graph Testing

Course Outcomes: At the end of the course, the student will be able to

1. Understand the concepts of software testing and taxonomy of bugs.
2. Construct control flow graphs for different programs.
3. Apply and Test the applications using different testing methods and automation tools.
4. Build paths and decision tables for various problems
5. Analyze state graphs for different problems and apply transition testing on them.

Unit 1: Introduction 10

Purpose of testing, Dichotomies, model for testing, consequences of bugs, taxonomy of bugs.

Unit 2: Flow Graphs and Path Testing 10

Basics concepts of path testing, predicates, path predicates and achievable paths, path sensitizing, path instrumentation, application of path testing.

Unit 3: Transaction Flow Testing & Domain Testing 12

Transaction flows, transaction flow testing techniques. Dataflow testing: Basics of dataflow testing, strategies in dataflow testing, application of dataflow testing. DOMAIN TESTING: Domains and paths, Nice & ugly domains, domain testing.

Unit 4: Paths, Path Products and Regular Expressions 10

Path Products & Path Expression, Reduction Procedure, Applications, Regular Expressions & Flow Anomaly Detection.

Logic Based Testing: Overview, Decision Tables, Path Expressions, KV Charts and Specifications.

Unit 5 State, State graphs and Transaction Testing 10

State Graphs, Good & Bad State Graphs, State Testing, Testability Tips.

Graph Matrices and Application: Motivational Overview, Matrix of Graph, Relations, Power of a Matrix, Node Reduction Algorithm, Building Tools.

Prescribed Text Book:

1. Baris Beizer, Software testing techniques. Dreamtech, 2nd Ed.

Reference Text books:

1. Dr.K.V.K.K.Prasad, Software Testing Tools. Dreamtech.

3	-	-	3	54

Course Objectives: This course is designed to

1. Describe the activities in the different phases of the object-oriented development lifecycle.
2. Understand the concepts of object-oriented model.
3. Model a real-world application by using UML diagram.
4. Describe architectural modelling.
5. Design an application of UML.

Course Outcomes: After completion of the course, students will be able to

1. The importance of modelling in UML.
2. Compare and contrast the object-oriented modes.
3. Design an application using Behavioural Modelling.
4. Apply UML diagrams to build library application.
5. Demonstrate the ability to implement standard design patterns

Unit 1 10

Introduction to UML: Importance of modelling, principles of modelling, object-oriented modelling, conceptual model of the UML, Architecture, Software Development Life Cycle.

Unit 2 12

Basic Structural Modelling: Classes, Relationships, common Mechanisms, and diagrams. Advanced Structural Modelling: Advanced classes, advanced relationships, Interfaces, Types and Roles, Packages. Class & Object Diagrams: Terms, concepts, modelling techniques for Class & Object Diagrams.

Unit 3 10

Basic Behavioural Modelling-I: Interactions, Interaction diagrams. Basic Behavioural Modelling-II: Use cases, Use case Diagrams, Activity Diagrams.

Unit 4 12

Advanced Behavioral Modelling: Events and signals, state machines, processes and Threads, time and space, state chart diagrams.

Unit 5**10**

Architectural Modelling: Component Deployment, Component diagrams and Deployment diagrams. Case Study: The Unified Library application, ATM

Text Books:

Year : III B. Tech
Semester : I Semester
Branch : CSE(DS)

Lecture Hours	Tutorial Hours	Practice Hours	Credits	Total Hours
3	-	-	3	52

Course Objectives: This course is designed to
To understand the fundamentals of data engineering and modern data pipelines.
To learn data ingestion, transformation and storage techniques.
To study batch and stream processing frameworks.
To design scalable and reliable ETL/ELT pipelines.
To explore monitoring, orchestration and optimization of data workflows.

Course Outcomes: At the end of this course, the students will be able to

1. Explain the architecture and components of data engineering pipelines.
2. Design and implement data ingestion and transformation workflows.
3. Apply batch and stream processing techniques for large-scale data.
4. Build and orchestrate reliable ETL/ELT pipelines.
5. Analyze performance, scalability and cost of data pipelines
6. Evaluate real-world data engineering tools and platforms.

Unit 1 10

Introduction to Data Engineering: Role of Data Engineer, Data Engineering Lifecycle, Data Pipeline Architecture, Types of Data Pipelines, Overview of ETL vs ELT, Data Sources and Data Formats.

Unit 2 10

Data Ingestion and Storage: Batch and Real-time Ingestion, Data Collection Tools, Message Queues, Data Lakes and Data Warehouses, Distributed File Systems, Data Modeling for Analytics.

Unit 3 09

Data Processing Frameworks: Batch Processing Concepts, Stream Processing Concepts, Apache Spark Fundamentals, Data Transformation Techniques, Handling Data Quality and Validation.

Unit 4 09

Pipeline Orchestration and Workflow Management: Workflow Scheduling, Dependency Management, Apache Airflow Concepts, Pipeline Automation, Error Handling and Recovery, CI/CD for Data Pipelines.

Unit 5 09

Monitoring, Optimization and Case Studies: Pipeline Monitoring and Logging, Performance Tuning, Cost Optimization, Security and Governance, Real-world Case Studies in Data Engineering.

Lecture Hours

3

Tutorial Hours

0

Practice Hours

0

Credits

3

Course Objectives:

1. To provide a grand tour of the operating system architecture and its functions.
2. To gain knowledge in process & thread synchronization, scheduling.
3. To know the paging & memory management techniques.
4. To understand memory, files, i/o and mass storage.
5. To know about protection and security in operating systems.

Course Outcomes:

At the end of the course, the student will be able to

1. Understand operating system functionalities, process concepts, scheduling criteria and scheduling algorithms.
2. Apply the concepts of process synchronization in real computing problems.
3. Analyse and investigate the local and global impacts of deadlocks and efficient utilization of memory Management techniques.
4. Suggest appropriate file system and disk organizations for a variety of computing scenario.
5. Evaluate security mechanisms in operating computing systems

Operating Systems Overview: Introduction, what operating systems do? Computer system Organization & architecture, Operating system operations.

Systems structures: Operating system services, systems calls, types of System calls.

Process Management: Process concepts; process Scheduling, operations on process, Process Scheduling Basic Concepts, Scheduling Criteria, scheduling algorithms, IPC, communication in Client-Server systems.

Unit 2 Multithreaded Programming and Concurrency 10

Multithreaded Programming: Overview, Multithreading models, thread libraries, thread issues and thread scheduling, multiprocessor scheduling.

Concurrency: Process synchronization, the critical-section problem, Petersons Solution, synchronization Hardware, semaphores, classic problems of synchronization, monitors.

Unit 3 Principles of Deadlock and Memory Management 9

Principles of Deadlock: System model, deadlock characterization, deadlock prevention, detection and avoidance, recovery from deadlock.

Memory Management: Swapping, contiguous memory allocation, paging, structure of the page table, segmentation.

Virtual Memory Management: Demand paging, page-replacement algorithms, Allocation of frames, Thrashing.

Unit 4 File System Interface and Implementation 9

File System Interface and Implementation: File Concept, Access Methods, Directory structure, File system mounting, allocation methods in Disk Space, free-space management.

Mass-storage Structure: Overview of Mass-storage structure, Disk structure, disk attachment, disk scheduling, RAID structure, stable-storage implementation.

Unit 5 I/O Systems and Protection 9

I/O Systems: I/O Hardware, Transforming I/O requests to hardware operations.

Protection: Protection, Goals of Protection, Principles of Protection, Domain of protection, Access Matrix, Implementation of Access Matrix, Access control, Revocation of Access Rights.

Security: The Security problem, program threats, system and network threats cryptography as a security tool, user authentication, firewalls to protect systems and networks, computer –security classifications.

ANNAMACHARYA UNIVERSITY

(ESTD UNDER AP PRIVATE UNIVERSITIES (ESTABLISHMENT AND REGULATION) ACT, 2016)

(UNIVERSITY LISTED IN UGC AS PER THE SECTION 2(f) OF THE UGC ACT, 1956)

RAJAMPET, Annamayya District, AP – 516126, INDIA

Title of the Course: Artificial Intelligence Lab
Category: PC
Couse Code: 24ACSE51L
Year: III B. Tech
Semester: I Semester
Branch: Common to CSE, CSE(DS)

Lecture Hours	Tutorial Hours	Practice Hours	Credits
0	0	3	1.5

Course Objectives: This course is designed to

1. To teach the methods of implementing algorithms using artificial intelligence techniques
2. To illustrate search algorithms
3. To demonstrate the building of intelligent agents

Course Outcomes: After completion of the course, students will be able to

1. Implement search algorithms.
2. Solve Artificial intelligence problems
3. Design chatbot and virtual assistant

Note: It is suggested for every student to complete all the experiments in the semester.

1. Write a program to implement DFS and BFS
2. Write a program to implement Crypt Algorithm
3. Write a Program to find the solution for traveling salesman Problem
4. Write a program to implement Simulated Annealing Algorithm
5. Write a program to find the solution for the wumpus world problem
6. Write a program to implement 8 puzzle problem
7. Write a program to implement Towers of Hanoi problem
8. Write a program to implement A* Algorithm.
9. Write a program to implement A0* Algorithm
10. Write a program to implement Hill Climbing Algorithm
11. Build a Chatbot using AWS Lex, Pandora bots.
12. Build a bot that provides all the information related to your college.
13. Write a program to implement Magic square.

(UNIVERSITY LISTED IN UGC AS PER THE SECTION 2(f) OF THE UGC ACT, 1956)

RAJAMPET, Annamayya District, AP – 516126, INDIA

Title of the Course: Computer Networks Lab
Category: PC
Couse Code: 24ACSE52L
Year: III B. Tech
Semester: I Semester
Branch: Common to CSE,AI&DS,AIML,CSE(AI),CSE(DS),CSE(AIML),CSE(IOTBSCT)

Lecture Hours	Tutorial Hours	Practice Hours	Credits
0	0	3	1.5

Course Objectives: This course is designed to:

1. To understand the working principle of various communication protocols.
2. To understand the network simulator environment and visualize a network topology and observe its performance
3. To analyze the traffic flow and the contents of protocol frames.
4. Familiarize with the applications of Internet.

Course Outcomes: After completion of the course, students will be able to

1. To understand the working principle of various communication protocols.
2. To understand the network simulator environment and visualize a network topology and observe its performance.
3. To analyze the traffic flow and the contents of protocol frames.
4. Critique the existing routing protocols

Note: It is suggested for every student to complete all the experiments in the semester.

1. Simulate network topologies Star, Bus, Mesh and Ring using Packet Tracer Tool.
2. Implement the data link layer framing methods such as character, character stuffing and bit stuffing.
3. Implement on a data set of characters the three CRC polynomials – CRC 12, CRC 16 and CRC CCIP..
4. Implement Dijkstra's algorithm to compute the shortest path through a network
5. Implement and simulate algorithm for Distance vector routing protocol.
6. Implement and simulate algorithm for Link state routing protocol.
7. Install network simulator NS-2 in any of the Linux operating system and simulate wired and wireless scenarios
8. Using Wireshark observe data transferred in client server communication using UDP and identify the UDP datagram.

9. Using Wireshark observe Three Way Handshaking Connection Establishment, Data Transfer and Three-Way Handshaking Connection Termination in client server communication using TCP.
10. Design and configure a network with multiple subnets with wired and wireless LANs using required network devices. Configure the following services in the network- TELNET, SSH, FTP server, Web server, File server, DHCP server and DNS server. ..
11. Implement Simple Mail Transfer Protocol
12. Create a simple LAN connection between two PCs using a switch in Packet Tracer and test connectivity using the ping command.
13. Configure IP addresses manually for hosts in different subnets and verify communication between them using a router.
14. Observe and analyze basic network packets such as ARP, ICMP, TCP, and UDP using Wireshark.

Title of the Course: Data Mining Lab
Category: PC
Couse Code: 24ACSE53L
Year: III B. Tech
Semester: I Semester
Branch: Common to CSE,AI&DS,CSE(DS)

Lecture Hours	Tutorial Hours	Practice Hours	Credits
0	0	3	1.5

Course Objectives: This course is designed to

1. Explain fundamental concepts of data mining and data exploration.
2. Describe data preprocessing and transformation techniques.
3. Illustrate association rule mining and classification methods.
4. Examine different data mining algorithms and their evaluation methods
5. Discuss prediction and clustering techniques using the Orange Data Mining tool.

Course Outcomes: After completion of the course, students will be able to

1. Perform data exploration and preprocessing on datasets
2. Apply data transformation techniques to prepare data for analysis.
3. Implement association rule mining and classification methods for pattern discovery.
4. Analyze and evaluate the performance of data mining algorithms.
5. Develop prediction and clustering models using the Orange Data Mining tool.

Note: It is suggested for every student to complete all the experiments in the semester.

Note: It is suggested for every student to complete all the experiments in the semester.

1. Demonstration on basic data exploration and identification of interesting patterns.
2. Load datasets and perform saving/loading operations using a data mining tool.
3. Perform data preprocessing on Melbourne Housing dataset (handling missing values, normalization).
4. Apply data transformation and visualization techniques for better understanding of datasets.
5. Generate frequent itemsets using association rule mining techniques.
6. Perform association rule discovery and interpret support, confidence, and lift.
7. Compare different association rule strategies and analyze their effectiveness.
8. Implement decision tree induction using Information Gain and Gain Ratio.
9. Perform classification on heart disease dataset using Naïve Bayes and Neural Networks.
10. Perform classification using Support Vector Machines and Decision Tree.
11. Compare classification algorithms and identify the best method using evaluation metrics.
12. Predict class labels using classification tree models for test samples.
13. Evaluate regression models to predict numerical values of test samples.
14. Implement k-means clustering and analyze clustering results.

Task Resources:

Download and install Orange data mining tool from

Title of the Course: GENDER SENSITIZATION
Category: MC
Couse Code: 24AAUD51T
Branch/es: Common to all branches
Year: III B.Tech
Semester: I Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits	Total Hours
2	-	-	-	32

Course Objectives: This course is designed to

1. To enable students to understand the gender related issues, and foster humane attitude,
2. To familiarize them about constitutional safeguards for gender equality.
3. To expose students to debates on the politics and economics of work related discrimination.
4. To help students reflect critically on gender violence.
5. To make them understand gender identities and gender relations as part of culture.

Course Outcomes: After completion of the course, students will be able to

1. Understand the basic concepts of gender and its related terminology.
2. Identify the biological, sociological, psychological and legal aspects of gender.
3. Understand how gender discrimination prevails in our society and how to counter it.
4. Analyze the gender division of labor and its relation to politics and economics.
5. Appraise how gender-role beliefs and sharing behavior are associated with more well-being

Unit 1 UNDERSTANDING GENDER

6

Introduction: Definition of Gender-Basic Gender Concepts and Terminology-Exploring Attitudes towards Gender-Socialization: Making Women, Making Men - Preparing for Womanhood. Growing up Male.

Unit 2 GENDER ROLES AND RELATIONS

6

Struggles with Discrimination-Gender Roles and Relations-Types of Gender Roles- Gender Roles and Relationships Matrix-Missing Women-Sex Selection and its Consequences- Declining Sex Ratio- Demographic Consequences-Gender Spectrum.

Unit 3 GENDER AND LABOUR

7

Division and Valuation of Labor-Housework: The Invisible Labor- “My Mother doesn’t Work”. “Share the Load”- Unrecognized and Unaccounted work -Gender Development Issues-Gender, Governance and Sustainable Development-Gender and Human Rights-Gender and Mainstreaming

Unit 4 GENDER-BASED VIOLENCE

7

The Concept of Violence- Types of Gender-based Violence- Human Rights Perspective-Sexual Harassment - Domestic Violence - Different forms of violence against women - Causes of violence, impact of violence against women - Consequences of gender-based violence

Unit 5 GENDER AND CULTURE

6

Gender and Films-Gender and Electronic Media-Gender and Advertisement-Gender and Popular Literature- Gender Development Issues-Gender Sensitive Language- Just Relationships

Title of the Course: Data Visualization

Category: PC

Year III BTech

Semester: II Semester

Course Code: 24ACSM61T

Branches: CSE(AIML),CSE(DS),AIML

Lecture Hours	Tutorial Hours	Practice Hours	Credits	Total Hours
3	-	-	3	52

COURSE OBJECTIVES

1. To understand the principles, techniques, and tools of data visualization.
2. To develop the ability to transform data into visual insights using different types of charts and plots.
3. To introduce the cognitive and perceptual foundations of effective data visualization.
4. To apply tools and programming environments (like Python, Tableau, or Power BI) for creating interactive and dynamic visualizations.
5. To analyze real-world datasets and effectively communicate data-driven findings visually.

COURSE OUTCOMES

1. Interpret different types of data and recognize the appropriate visualization methods.
2. Design effective and interactive data visualizations using various tools.
3. Apply visual encoding and perceptual principles in presenting complex data.
4. Analyze and visualize real-world data sets using Python libraries and dashboards.
5. Create visual stories and dashboards for effective communication of insights.

UNIT 1 - INTRODUCTION TO DATA VISUALIZATION & PERCEPTION

10

Introduction to Data Visualization, Importance and Scope of Data Visualization, Data Types and Sources, Visual Perception: Pre-attentive Processing, Gestalt Principles, Data-Ink Ratio, Data Density, Lie Factor, Visualization Process and Design Principles, Tools Overview: Tableau, Power BI, Python Libraries.

UNIT 2 - VISUALIZATION TECHNIQUES FOR CATEGORICAL & QUANTITATIVE DATA 10

Charts for Categorical Data: Bar Charts, Pie Charts, Column Charts, Charts for Quantitative Data: Histograms, Line Charts, Boxplots, Scatter Plots, Bubble Charts, Heatmaps, Choosing the Right Chart Type, Best Practices in Labeling, Coloring, and Scaling.

UNIT 3- MULTIDIMENSIONAL, TEMPORAL AND HIERARCHICAL DATA VISUALIZATION 12

Visualizing Multivariate Data: Parallel Coordinates, Radar Charts, Time-Series Visualization: Time Plots, Animation over Time, Geographic Data Visualization: Maps, Choropleths, Hierarchical Data: Treemaps, Sunburst Charts, Network and Graph Visualization.

UNIT 4 - DATA VISUALIZATION USING PYTHON AND DASHBOARD 10

Introduction to Matplotlib, Seaborn, and Plotly, Creating Static and Interactive Charts, Pandas Visualization Capabilities, Dashboards with Dash, Streamlit, Power BI, Case Studies: Real-world Dataset Visualization.

UNIT 5 - STORYTELLING WITH DATA AND ETHICAL VISUALIZATION 10

Storytelling and Narrative Techniques in Visualization, Dashboards and Reporting, Misleading Visualizations and Bias, Ethical Principles in Data Visualization, Final Project: Create a Storytelling Dashboard with Real Data.

Lecture Hours	Tutorial Hours	Practice Hours	Credits	Total Hours
3	-	-	3	56

Course Objectives: This course is designed to

1. To introduce the fundamental concepts and types of machine learning
2. To develop a deep understanding of supervised and unsupervised learning algorithms.
3. To understand mathematical foundations of learning models and algorithms.
4. To evaluate model performance using appropriate statistical and analytical tools.
5. To apply machine learning techniques to solve real-world problems using tools such as Scikit learn.

Course Outcomes: After completion of the course, students will be able to

1. Understand and distinguish among different types of learning methods.
2. Apply supervised and unsupervised learning algorithms to datasets
3. Analyze model performance using cross-validation and error metrics
4. Build, test, and improve machine learning models for classification and prediction.
5. Use Python-based libraries (e.g., Scikit-learn) to implement ML algorithms.

Unit 1 Introduction to Machine Learning and Linear Models 12

Definition and Scope of Machine Learning, Applications and Types of Learning: Supervised, Unsupervised, Reinforcement, Linear Regression: Least Squares, Cost Function, Gradient Descent, Polynomial Regression and Overfitting, Evaluation Metrics: RMSE, MAE, R^2 Score, Bias-Variance Trade off. Concept Learning: FIND –S Algorithm, Candidate elimination algorithm

Unit 2 Classification Algorithms 12

Classification Overview and Decision Boundaries, Logistic Regression: Sigmoid Function and Cost, K Nearest Neighbors (KNN), Naïve Bayes Classifier, Decision Trees and Random Forests, Model Evaluation: Confusion Matrix, Precision, Recall, F1-Score.

Unit 3 Support Vector Machines and Ensemble Methods 10

Support Vector Machines: Concepts, Kernels, Hyperplane and Margin Concepts, Kernel Tricks: RBF and Polynomial, Ensemble Learning: Bagging, Boosting, and Voting, Gradient Boosting, AdaBoost, and XGBoost, Model Tuning and Hyperparameter Optimization

Unit 4 Unsupervised Learning Techniques 10

Clustering Overview: Applications, K-Means Clustering Algorithm, Hierarchical Clustering, DBSCAN and Density-Based Methods, Principal Component Analysis (PCA) for Dimensionality Reduction, Silhouette Score, Davies-Bouldin Index for Cluster Validation.

Unit 5 Advanced Topics and Application**12**

Reinforcement Learning Basics and Markov Decision Processes, Introduction to Neural Networks and Deep Learning, Cross-Validation Techniques: k-Fold, Leave-One-Out, Feature Engineering and Feature Selection, Deployment of ML Models (Flask, Streamlit, etc.), Case Studies: Medical Diagnosis, Spam Detection, Credit Scoring.

(UNIVERSITY LISTED IN UGC AS PER THE SECTION 2(f) OF THE UGC ACT, 1956)

RAJAMPET, Annamayya District, AP – 516126, INDIA

Title of the Course: **Automata Theory and Compiler Design**
Category: PC
Course Code: 24CSE61T
Year: III B. Tech
Semester: II Semester
Branch: Common to CSE, CSE(DS), CSE(AIML), CSE(IOTCSBCT)

Lecture Hours	Tutorial Hours	Practice Hours	Credits	Total Hours
3	-	-	3	58

Course Objectives: This course is designed to:

1. Able to understand the concept of abstract machines, construct FA, Regular Expressions for the regular languages and equivalent FSMs.
2. Able to construct pushdown automata equivalent to Context free Grammars, construct Turing Machines and understand undecidability.
3. Emphasize the concepts learnt in phases of compiler, lexical analyser and Top-down parser.
4. Able to understand the concepts of Bottom-up parser, Intermediate Code Generation.
5. Able to understand the concepts of Code optimizer and Code Generation.

Course Outcomes: At the end of the course, the student will be able to

1. Demonstrate knowledge on Automata Theory, Regular Expression and Analyze and Design of finite automata, and prove equivalence of various finite automata.
2. Demonstrate knowledge on context free grammar, Analyze and design of PDA and TM.
3. Understand the basic concept of compiler design, and its different phases which will be helpful to construct new tools like LEX, YACC, etc.
4. Ability to implement semantic rules into a parser that performs attribution while parsing and apply error detection and correction methods.
5. Apply the code optimization techniques to improve the space and time complexity of programs while programming and Ability to design a compiler.

Unit 1 Introduction

12

Introduction, Alphabets, Strings and Languages, Chomsky Hierarchy, Automata and Grammars, Regular Grammar and Language, Finite Automata, Deterministic finite Automata (DFA), Nondeterministic finite Automata (NFA), Equivalence of NFA and DFA, Minimization of Finite Automata, Regular Expressions, Converting Regular Grammar and Expression into Finite Automata, Pumping lemma for regular sets, Closure properties of regular sets (Without proof).

Unit 2 Context Free Grammars and Pushdown Automata

12

Context Free Language, Context Free Grammar, Derivation and Parse tree, Ambiguity, Simplification of CFG's, Chomsky Normal Form, Greibach Normal Form, Push Down Automata (PDA), Design of PDA, Equivalence of PDA and CFL/CFG

Unit 3 Turing Machines and Introduction to Compilers

10

Turing Machine, TM Model, Language acceptance, Design of Turing Machine, Compilers, Phases of Compiler, The role of Lexical Analyzer, Input Buffering.

Unit 4 Parsers and Intermediate Code Generation

12

Parser, Top-Down parsers: Recursive Descent Parsers, Predictive Parsers Bottom-up Parsers: Shift-Reduce Parsing, LR parsers, Intermediate Code Generation: Three address codes.

Unit 5 Code Optimization and Code Generation

12

Code Optimization: Peephole optimization, Basic blocks and flow graphs, DAG, Principles of Source Code Optimization, Code Generation: Issues in Design of Code Generation, Simple Code Generator

(ESTD UNDER AP PRIVATE UNIVERSITIES (ESTABLISHMENT AND REGULATION) ACT, 2016)

(UNIVERSITY LISTED IN UGC AS PER THE SECTION 2(f) OF THE UGC ACT, 1956)

RAJAMPET, Annamayya District, AP – 516126, INDIA

Title of the Course: Cryptography and Network Security
Category: PE
Couse Code: 24ACSM6BT
Year: III B. Tech
Semester: II Semester
Branch: CSE(AIML),AI&DS,CSE(DS),AIML,CSE(AI)

Lecture Hours	Tutorial Hours	Practice Hours	Credits	Total Hours
3	-	-	3	51

Course Objectives: This course aims at training students to master the:

1. The concepts of classical encryption techniques and concepts of finite fields and number theory
2. Working principles and utilities of various crypto graphic algorithms including secret key cryptography, hashes, and message digests, and public key algorithms
3. Design issues and working principles of various authentication protocols, PKI standards
4. Various secure communication standards including Kerberos, I Psec, TLS and email
5. Concepts of cryptographic utilities and authentication mechanisms to design secure applications

Course Outcomes:

After completion of the course, students will be able to

1. Identify information security goals, classical encryption techniques and acquire fundamental knowledge on the concepts off in it fields and number theory
2. Compare and apply different encryption and decryption techniques to solve problems related to confidentiality and authentication
3. Apply the knowledge of crypto graphic check sums and evaluate the performance of different message digest algorithms for verifying the integrity of varying message sizes.
4. Demonstrate the ability to apply user authentication principles including Kerberos for secure authentication
5. Gain proficiency in securing web communications using TLS and HTTPS, manage secure remote access with SSH, and design firewall policies

Unit 1 Computer and Network Security Concepts

11

Computer and Network Security Concepts: Computer Security Concepts, The OSI Security Architecture, Security Attacks, Security Services, Security Mechanisms, A Model for Network Security.

Classical Encryption Techniques: Symmetric Cipher Model, Substitution Techniques, Transposition Techniques, Steganography.

Unit 2 Number Theory

10

The Euclidean Algorithm, Modular Arithmetic, Fermat's and Euler's Theorems, The Chinese Remainder Theorem, Discrete Logarithms, Finite Fields: Finite Fields of the Form $GF(p)$, Finite Fields of the Form $GF(2^n)$. Public Key Cryptography: Principles, Public Key Cryptography Algorithms, RSA Algorithm, Diffie Hellman Key Exchange, Elliptic Curve Cryptography

Block Ciphers: Traditional Block Cipher Structure, The Data Encryption Standard, Advanced Encryption Standard: AES Structure, AES Transformation Functions

Unit 3 Cryptographic Hash Functions:

10

Cryptographic Hash Functions: Application of Cryptographic Hash Functions, Requirements & Security, Secure Hash Algorithm, Message Authentication Functions, Requirements & Security, HMAC & CMAC. Digital Signatures: NIST Digital Signature Algorithm, Distribution of Public Keys, X.509 Certificates, Public- Key Infrastructure.

Unit 4 User Authentication

10

User Authentication : Remote User Authentication Principles, Kerberos. Electronic Mail Security: Pretty Good Privacy (PGP) And S/MIME.

IP Security: IP Security Overview, IP Security Policy, Encapsulating Security Payload, Combining Security Associations, Internet Key Exchange.

Unit 5 Transport Level Security

10

Transport Level Security: Web Security Requirements, Transport Layer Security (TLS), HTTPS, Secure Shell (SSH).

Firewalls: Fire wall Characteristics and Access Policy, Types of Fire walls, Fire wall Location and Configurations.

Textbooks:

- 1) Cryptography and Network Security – William Stallings, Pearson Education, 8th Edition.
- 2) Cryptography, Network Security and Cyber Laws–Bernard Menezes, Cengage Learning, 2010 edition.

Title of the Course Distributed Systems

Category PE

Year III

Semester II

Course Code 24AAID6AT

Branch/es AI&DS,CSE(DS)

Lecture Hours

3

Tutorial Hours

0

Practice Hours

0

Credits

3

Course Objectives:

1. This course focuses on the fundamentals of cryptography and its application to network security.
2. Acquire the depth knowledge on distributed objects and remote invocations.
3. Apply various domain naming services.
4. Compare the different issues of Global clocks, process states coordination and agreement.

Course Outcomes:

At the end of the course, the student will be able to

1. Understand the characteristics of distributed systems and system models.
2. Describe knowledge on distributed objects and remote invocations
3. Use various domain naming services.
4. Distinguish different issues of Global clocks, process states coordination and agreement.
5. Estimate the optimistic concurrency control and distributed transactions.

Unit 1

Introduction

9

Introduction, Examples of Distributed systems, Resource sharing and web, challenges, System models: Introduction, Architectural and Fundamental models, networking and Inter-networking, Inter-process Communication.

Unit 2	Operating system support	10
---------------	---------------------------------	-----------

Introduction, Communication between distributed objects, RPC, Events and notifications, Case study-Java RMI. Operating system support: Introduction, OS layer, Protection, Processes and Threads, Communication and Invocation, Operating system architecture. Distributed File Systems-Introduction, File Service architecture.

Unit 3	Name Services	9
---------------	----------------------	----------

NAME SERVICES: Introduction, Name Services and the Domain Name System, Case study of the Global Name Service. Peer to Peer Systems: Introduction, Napster and its legacy, Peer to Peer middleware, routing overlays.

Unit 4	Coordination and Agreement	8
---------------	-----------------------------------	----------

Introduction, Clocks, events and Process states, Synchronizing physical clocks, logical time and logical clocks, global states, distributed debugging. Coordination and Agreement: Introduction, Distributed mutual exclusion, Elections, Multicast communication, consensus and related problems.

Unit 5	Distributed Transactions	10
---------------	---------------------------------	-----------

Introduction, Transactions, Nested Transactions, Locks, Optimistic concurrency control, Timestamp ordering. Distributed Transactions: Introduction, Flat and Nested Distributed Transactions, Atomic commit protocols, Concurrency control in distributed transactions, Distributed deadlocks, Transaction recovery, Replication Introduction, Fault tolerant services, Transactions with replicated data.

Title of the Course:	Software Project Management
Category:	PE
Couse Code:	24ACSE6AT
Year:	III B. Tech
Semester:	II Semester
Branch:	CSE,CSE(AIML), CSE(IOTCSBCT) ,CSE(DS)

Lecture Hours	Tutorial Hours	Practice Hours	Credits	Total Hours
3	-	-	3	54

Course Objectives:

1. Understand the basics of the project management and requirements management throughout the product development cycle.
2. To Know the distinction between conventional and modern approaches for developing a software project.
3. Learn about the life cycle phases and artifacts in software development process.
4. Understand the importance of Work breakdown structures and responsibilities while working in a real time projects.
5. Know how to measure the software quality and risk management in a modern project profiles

Course Outcomes: Blooms Level of Learning

At the end of the course, the student will be able to

1. Understand the conventional software Management and Software Economics factors that affect the development of a software project.
2. Recognize Artifacts of the software process and can also use artifacts in Software Development lifecycle.
3. Analyze the workflows and can create check points of process in a project management
4. Organize the work breakdown structures and assign the roles & responsibilities in a project organization for establishing an active network.
5. Apply project metrics in managing software project

Unit 1**12**

Conventional Software Management: The water fall model, conventional software Management performance Evolution of Software Economics: Software Economics. Pragmatic Software Cost Estimation Improving Software Economics: Reducing Software Product Size, Improving Software Processes, Improving Team Effectiveness, Improving Automation, Achieving Required Quality, Peer Inspections.

Unit 2**10**

The old way and the new: The principles of conventional software Engineering, principles of modern software management, transitioning to an iterative process.

Lifecycle phases: Engineering and production stages, inception, Elaboration, construction, transition phases. Artifacts of the process: The artifact sets, Management artifacts, Engineering artifacts, programmatic artifacts

Unit 3**12**

Workflows of the process: Software process workflows, Inter Trans workflows. Check points of the Process: Major Mile Stones, Minor Milestones, Periodic status assessments. Iterative Process Planning: work break down structures, planning guidelines, cost and schedule estimating, Iteration planning process, Pragmatic planning

Unit 4**10**

Process Automation: Automation Building Blocks, The Project Environment.

Project Control and Process instrumentation: The seven core Metrics, Management indicators, quality indicators Tailoring the Process: Process discriminants. Managing people and organizing teams.

Unit 5**10**

Project Organizations and Responsibilities: Line-of-Business Organizations, Project Organizations, evolution of Organizations.

Future Software Project Management: modern Project Profiles, Next generation Software economics, modern process transitions.

Case Study: The Command Center Processing and Display System-Replacement(CCPDS-R)

Category PC

Year III

Semester II

Course Code 24AAID62T

Branch/es AI&DS

Lecture Hours

3

Tutorial Hours

0

Practice Hours

0

Credits

3

Course Objectives:

1. Understand the basics of Natural Language Processing and Information Retrieval.
2. Learn text preprocessing and text representation techniques.
3. Apply machine learning methods for text analysis.
4. Understand transformer models and modern NLP techniques.
5. Explore applications and ethical issues in NLP systems.

Course Outcomes:

At the end of the course, the student will be able to

1. Explain basic concepts of NLP and Information Retrieval.
2. Apply preprocessing and text representation methods.
3. Implement machine learning techniques for text classification and analysis.
4. Use transformer models for advanced NLP tasks.
5. Analyze real-world NLP applications and ethical challenges.

Unit 1 Fundamentals of Natural Language Processing

10

Introduction to NLP: Definitions, Applications, Challenges, Linguistic Essentials: Syntax, Semantics, Pragmatics, Text Processing: Tokenization, Lemmatization, Stemming, Stopword Removal, Normalization, and N-gram Generation, POS Tagging and Named Entity Recognition, NLP Libraries: NLTK, SpaCy Overview.

Unit 2 Text Representation and Retrieval Models 9

Bag of Words, TF-IDF, Vector Space Model, Boolean Retrieval Model, Probabilistic Retrieval Models, Document Indexing, Inverted Indexing, Query Processing, Ranking Algorithms, Cosine Similarity and Distance Measures.

Unit 3 Machine Learning for NLP and IR 9

Text Classification using Naïve Bayes, SVM, and Decision Trees, Clustering Techniques for Text Mining, Information Extraction, Sentiment Analysis, Topic Modeling, Recommendation Systems, Evaluation Metrics: Precision, Recall, F1-Score, MAP and NDCG.

Unit 4 Transformers and Advanced NLP 9

Attention Mechanism and Self-Attention, Transformer Architecture: Encoder-Decoder Models, Pretrained Language Models: BERT, RoBERTa, GPT, Fine-tuning Transformers for Text Classification, Question Answering and Text Summarization using Transformers, Sentiment Analysis and Zero-shot Classification.

Unit 5 Applications, Ethics, and Multilingual NLP 9

Machine Translation: Rule-based vs Neural MT, Chatbots and Conversational AI, Information Retrieval and Question Answering, Speech-to-Text and Text-to-Speech Overview, Multilingual NLP and Low-Resource Languages, Bias, Fairness, and Ethics in NLP.

Prescribed Text Books:

3

1.5

Course Objectives

1. To understand perceptron limitations and basic neural network learning.
2. To implement ANN and deep feed-forward networks using backpropagation.
3. To develop image classification models using deep neural networks.
4. To design CNN architectures with optimization, normalization, and regularization.
5. To evaluate model accuracy, epochs, and CPU–GPU performance with data augmentation.

Course Outcomes

1. Analyze perceptron behavior on linearly and non-linearly separable data.
2. Build and test ANN and deep feed-forward neural networks.
3. Implement image classification using neural networks and CNNs.
4. Apply padding, batch normalization, dropout, and regularization in CNN design.
5. Evaluate performance using accuracy, epochs, augmentation, and hardware comparison.

Note: It is suggested for every student to complete all the experiments in the semester.

- 1
 - a. Design a single unit perceptron for classification of a linearly separable binary dataset without using pre-defined models. Use the Perceptron() from sklearn.
 - b. Identify the problem with single unit Perceptron. Classify using Or-, And- and Xor-ed data and analyze the result.
- 2 Build an Artificial Neural Network by implementing the Backpropagation algorithm and test the same using appropriate data sets. Vary the activation functions used and compare the results.
- 3 Build a Deep Feed Forward ANN by implementing the Backpropagation algorithm and test the same using appropriate data sets. Use the number of hidden layers ≥ 4 .
- 4 Design and implement an Image classification model to classify a dataset of images using Deep Feed Forward NN. Record the accuracy corresponding to the number of epochs. Use the MNIST, CIFAR-10 datasets.

- 5 Design and implement a CNN model (with 2 layers of convolutions) to classify multi category image datasets. Record the accuracy corresponding to the number of epochs. Use the MNIST, CIFAR-10 datasets.
- 6 Design and implement a CNN model (with 4+ layers of convolutions) to classify multi category image datasets. Use the MNIST, Fashion MNIST, CIFAR-10 datasets. Set the No. of Epoch as 5, 10 and 20. Make the necessary changes whenever required. Record the accuracy corresponding to the number of epochs.
Record the time required to run the program, using CPU as well as using GPU in Colab.
- 7 Design and implement a CNN model (with 2+ layers of convolutions) to classify multi category image datasets. Use the concept of padding and Batch Normalization while designing the CNN model. Record the accuracy corresponding to the number of epochs. Use the Fashion MNIST/MNIST/CIFAR10 datasets.
- 8 Design and implement a CNN model (with 4+ layers of convolutions) to classify multi category image datasets. Use the concept of regularization and dropout while designing the CNN model. Use the Fashion MNIST datasets. Record the Training accuracy and Test accuracy corresponding to the following architectures:
Base Model
Model with L1 Regularization
Model with L2 Regularization
Model with Dropout
Model with both L2 (or L1) and Dropout
- 9 Use the concept of Data Augmentation to increase the data size from a single image.
- 10 Design and implement a CNN model to classify CIFAR10 image dataset. Use the concept of Data Augmentation while designing the CNN model. Record the accuracy corresponding to the number of epochs.
- 11 Design and implement a Multilayer Perceptron (MLP) model for classification of the Iris dataset. Compare the training and testing accuracy for different hidden layer sizes.
- 12 Implement an ANN model using different optimization algorithms such as SGD, Adam, and RMSProp. Compare their performance using suitable datasets.
- 13 Design and implement a CNN model to classify handwritten digit images using the MNIST dataset and display sample predictions with output labels.
- 14 Implement Transfer Learning using a pre-trained CNN model such as VGG16 or ResNet for image classification on a small custom dataset. Compare the accuracy before and after fine-tuning.

Title of the Course : **Machine Learning Lab**
Category : PC
Couse Code : 24ACSE62L
Year : III B. Tech
Semester : II Semester
Branch : Common to CSE,AI&DS,CSE(DS)

Lecture Hours	Tutorial Hours	Practice Hours	Credits
0	0	3	1.5

Course Objectives: The course is introduced for students

1. Make use of Data sets in implementing the machine learning algorithms
2. Implement the machine learning concepts and algorithms in any suitable language of choice.

Course Outcomes: At the end of the course, the student will be able to

1. Understand the Mathematical and statistical prospective of machine learning algorithms through python programming
2. Appreciate the importance of visualization in the data analytics solution.
3. Derive insights using Machine learning algorithms

Note: It is mandatory for every student to complete all the experiments in the semester.

List of Experiments:

Note:

- a) The programs can be implemented in Python.
 - b) For Problems 1 to 6 and 10, programs are to be developed without using the built-in classes or APIs of Python.
 - c) Data sets can be taken from standard repositories <https://archive.ics.uci.edu/ml/datasets.html>) or constructed by the students.
1. Implement and demonstrate the FIND-S algorithm for finding the most specific hypothesis based on a given set of training data samples. Read the training data from a .CSV file.
 2. For a given set of training data examples stored in a CSV file, implement and demonstrate the Candidate-Elimination algorithm to output a description of the set of all hypotheses consistent with the training examples.
 3. Write a program to demonstrate the working of the decision tree based ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample.
 4. Build an Artificial Neural Network by implementing the Back-propagation algorithm and test the same using appropriate data sets.

- Write a program to implement the naïve Bayesian classifier for a sample training data set stored as a .CSV file. Compute the accuracy of the classifier, considering few test data sets.
- Assuming a set of documents that need to be classified, use the naïve Bayesian Classifier model to perform this task. Built-in Java classes/API can be used to write the program. Calculate the accuracy, precision, and recall for your data set.
- Write a program to construct a Bayesian network considering medical data. Use this model to demonstrate the diagnosis of heart patients using standard Heart Disease Data Set. You can use Java/Python ML library classes/API.
- Apply EM algorithm to cluster a set of data stored in a .CSV file. Use the same data set for clustering using k-Means algorithm. Compare the results of these two algorithms and comment on the quality of clustering. You can add Java/Python ML library classes/API in the program.
- Write a program to implement k-Nearest Neighbour algorithm to classify the iris data set. Print both correct and wrong predictions. Java/Python ML library classes can be used for this problem.
- Implement the non-parametric Locally Weighted Regression algorithm in order to fit data points. Select appropriate data set for your experiment and draw graphs.
- Write a program to implement the Support Vector Machine (SVM) algorithm for classification using a suitable data set stored in a .CSV file. Evaluate the performance of the classifier using accuracy and confusion matrix.
- Implement the Random Forest algorithm for classification on a given data set. Compare its performance with the Decision Tree algorithm and analyze the results.
- Write a program to perform Principal Component Analysis (PCA) for dimensionality reduction on a given data set. Visualize the transformed data using graphs.
- Implement the Linear Regression algorithm to predict values from a given training data set stored in a .CSV file. Plot the regression line and calculate the prediction error.

Projects

- Predicting the Sale price of a house using Linear regression
- Spam classification using Naïve Bayes algorithm
- Predict car sale prices using Artificial Neural Networks
- Predict Stock market trends using LSTM
- Detecting faces from images

(ESTD UNDER AP PRIVATE UNIVERSITIES (ESTABLISHMENT AND REGULATION) ACT, 2016)

(UNIVERSITY LISTED IN UGC AS PER THE SECTION 2(f) OF THE UGC ACT, 1956)

RAJAMPET, Annamayya District, AP – 516126, INDIA

Title of the Course	:	Compiler Design Lab
Category	:	PC
Couse Code	:	24ACSE61L
Year	:	III B. Tech
Semester	:	II Semester
Branch	:	Common to CSE ,CSE(DS),CSE(AIML), CSE (IOTCSBCT)

Lecture Hours	Tutorial Hours	Practice Hours	Credits
0	0	3	1.5

Course Objectives: The course is introduced for students

1. Understand the fundamental concepts of automata, formal languages, and compiler design.
2. Apply knowledge of DFA, CFG, and PDA to solve language recognition and conversion problems.
3. Analyse different parsing techniques including top-down and bottom-up approaches.
4. Design lexical analysers and parsers for validating programming constructs.
5. Develop programs for grammar transformations such as left recursion removal and left factoring.

Course Outcomes: At the end of the course, the student will be able to

1. Design deterministic finite automata (DFA) and convert between different formal representations.
2. Apply automata theory concepts to convert FA to regular grammar and CFG to PDA
3. Implement parsing techniques including recursive descent and bottom-up parsers.
4. Develop lexical analyzers Using Lex.
5. Implement syntax Analziers using parsing technique and tools like Yacc.

Note: It is suggested Experiments for every student to complete all the experiments in the semester.

1. Write a program to Deterministic Finite Automata (DFA).
2. Write a program to FA to regular grammar conversion.
3. Write a program to Converting CFG to PDA (LL)
4. Write a program to Construct a Lexical Analyzer for validating identifiers, operators, comments, looping statements, key words.
5. Write a program to remove left recursion.
6. Write a program to remove left factoring.
7. Write a program to compute FIRST and FOLLOW sets,
8. Write a program to construct a Recursive Parser.
9. Write a program to construct a Recursive Descent Parsers.
10. Write a program to implement Bottom-up parsers.

11. Write a program to implement Nondeterministic Finite Automata (NFA) and convert it into an equivalent DFA.
12. Write a program to check whether a given string is accepted by a Push Down Automata (PDA).
13. Write a program to generate Intermediate Code using Three Address Code (TAC) representation.
14. Write a program to implement Shift Reduce Parsing for a given grammar and input string.
