SDG 6: Clean Water and Sanitation

Annual Report 2024–25

Annamacharya University is committed to the sustainable management and conservation of water resources, promotion of water-use efficiency and maintenance of a clean and hygienic campus environment. University realizes that sustainable and holistic water management is essential in the conservation of water and responsible use of water for sustainable living. As a higher educational institution, university has an important role reducing its environmental footprint and policy strives to provide a safe and healthy environment for teaching, on-teaching staff, students, and visitors. Rainwater harvesting arrangements have been implemented on the campus, wherein rooftop rainwater is collected through pipelines and directed into specially constructed percolation pits to facilitate groundwater recharge. These initiatives help conserve rainwater and reduce dependence on external water sources. During the academic year 2024-25, the University conducted awareness on responsible use of water, natural resources, cleanliness and protection of water bodies through recharging of rain water. Annamacharya University follows a stringent approach in the protection of water, conservation of water and their bodies and clean environment.

The university approach enables the students and staff to adopt the responsible use of water and the resources of the nature.
