Title of the Course: Matrices and Calculus
Category: BS
Course Code: 24BMAT11T
Branches: **Computer Science, AI&ML, AI&DA, Programming & Data Science**
Semester: I Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
3	0	0	3

Course Objectives: The goal is to familiarize oneself with matrix theory and its applications, gain a solid understanding of partial derivatives and mean value theorems to tackle mathematical problems, and develop proficiency in vector differentiation and integration to address complex challenges effectively.

Course Outcomes:
At the end of the course, the student will be able to
1. understand the methods for solving the system of linear equations
2. utilize matrix algebra techniques for engineering applications.
3. analyze the functions of several variables to optimization techniques.
4. use scalar and vector point functions across a range of technical disciplines.
5. apply vector integral theorems in evaluating double and triple integrals

Unit 1 Matrices 12

Rank of a matrix by echelon form, normal form, solving system of homogeneous and non-homogeneous linear equations, Cayley-Hamilton theorem (without proof), finding inverse and power of a matrix by Cayley-Hamilton theorem.

Unit 2 Eigen values and Eigen vectors 8

Eigen values and Eigen vectors and their properties, diagonalization of a matrix, Quadratic forms and nature of the quadratic forms, reduction of quadratic form to canonical form by orthogonal transformation.

Unit 3 Mean Value Theorems & Multivariable calculus 8

Taylor's theorem and Maclaurin's theorem for one variable (without proofs) – Simple problems.
Partial derivatives, total derivatives, chain rule, change of variables, Jacobian, Maxima and Minima of functions of two variables, method of Lagrange multipliers for three variables

Unit 4 Vector Differential Calculus 10

Scalar and vector point functions, vector operator Del, Gradient, Directional derivative, Divergence, Curl, Del applied twice to point functions, vector identities. Applications: Irrotational fields and solenoidal fields.

Unit 5 Vector Integral Calculus 10

Line integral, surface integral and volume integral. Green's theorem in the plane (without proof), verifications of Stroke's theorem (without proof) and Gauss's divergence theorem (without proof).

Prescribed Textbooks:

1. B.S. Grewal. *Higher Engineering Mathematics.* 44th Ed., Khanna Publishers, 2017.
2. J. Stewart. *Calculus: Early Transcendentals.* 7th Ed., Cengage Learning.

Reference Books:

1. G. B. Thomas, Maurice D. Weir and Joel Hass. *Thomas' Calculus*, 14th Ed., Pearson Publishers, 2022.
2. R.K. Jain, S.R.K. Iyengar. *Advanced Engineering Mathematics.* 5th Ed., Narosa Publications.

Title of the Course: Communicative English
Category: HSM
Course Code: 24BENG11T
Branches: **Computer Science, AI&ML, AI&DA, Programming & Data Science**
Semester: I Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
2	1	0	3

Course Objectives: The primary goal of the Communicative English course is to develop students' listening, reading, speaking, and writing skills, enhancing their comprehension, oral presentation, and reporting abilities. It focuses on improving grammatical structures and vocabulary, equipping students with the proficiency needed for effective communication and preparing them to meet industry standards.

Course Outcomes:
At the end of the course, the student will be able to
1. understand the context, topic, and pieces of specific information from social or transactional dialogues spoken by native speakers of English
2. analyze literary forms, journalistic articles and scientific readings for comprehension and retention
3. demonstrate effective writing and speaking skills
4. apply grammatical knowledge in speech and writing and formulate sentences with accuracy
5. produce coherent and unified paragraphs with adequate support and detail

Unit 1 HUMAN VALUES: The Gift of the Magi (Short Story) 12

Listening: Identifying the topic, the context and specific pieces of information by listening to short audio texts and answering a series of questions.
Speaking: Asking and answering general questions on familiar topics such as home, family, work, studies and interests; introducing oneself and others.
Reading: Skimming to get the main idea of a text; scanning to look for specific pieces of information.
Writing: Mechanics of Writing-Capitalization, Spellings, Punctuation-Parts of Sentences.
Grammar: Parts of Speech, Basic Sentence Structures-forming questions
Vocabulary: Synonyms, Antonyms, Affixes (Prefixes/Suffixes), Root words.

Unit 2 NATURE: The Brook by Alfred Tennyson (Poem) 8

Listening: Answering a series of questions about main ideas and supporting ideas after listening to audio texts.
Speaking: Discussion in pairs/small groups on specific topics followed by short structure talks.
Reading: Identifying sequence of ideas; recognizing verbal techniques that help to link the ideas in a paragraph together.
Writing: Structure of a paragraph - Paragraph writing (specific topics)
Grammar: Cohesive devices - linkers, use of articles and zero article; prepositions.
Vocabulary: Homonyms, Homophones, Homographs.

Unit 3 BIOGRAPHY: Elon Musk 8

Listening: Listening for global comprehension and summarizing what is listened to.

Speaking: Discussing specific topics in pairs or small groups and reporting what is discussed
Reading: Reading a text in detail by making basic inferences -recognizing and interpreting specific context clues; strategies to use text clues for comprehension.
Writing: Summarizing, Note-making, paraphrasing
Grammar: Verbs - tenses; subject-verb agreement; Compound words, Collocations
Vocabulary: Compound words, Collocations

Unit 4 INSPIRATION: The Toys of Peace by Saki 10
Listening: Making predictions while listening to conversations/ transactional dialogues without video; listening with video.
Speaking: Role plays for practice of conversational English in academic contexts (formal and informal) - asking for and giving information/directions.
Reading: Studying the use of graphic elements in texts to convey information, reveal trends/patterns/relationships, communicate processes or display complicated data.
Writing: Letter Writing: Official Letters, Resumes
Grammar: Reporting verbs, Direct & Indirect speech, Active & Passive Voice
Vocabulary: Words often confused, Jargons

Unit 5 MOTIVATION: The Power of Intrapersonal Communication (An Essay) 10
Listening: Identifying key terms, understanding concepts and answering a series of relevant questions that test comprehension.
Speaking: Formal oral presentations on topics from academic contexts
Reading: Reading comprehension.
Writing: Writing structured essays on specific topics.
Grammar: Editing short texts –identifying and correcting common errors in grammar and usage (articles, prepositions, tenses, subject verb agreement)
Vocabulary: Technical Jargons

Prescribed Textbooks:

2. https://www.youtube.com/channel/UC4cmBAit8i_NJZE8qK8sfpA

Title of the Course: Problem Solving through C Programming
Category: PC
Course Code: 24BCOM11T
Branches: **Computer Science, AI&ML, AI&DA, Programming & Data Science**
Semester: I Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
3	0	0	3

Course Objectives:

1. Understanding the steps in problem solving and formulation of algorithms to problems.
2. Develop programming skills as a means of implementing an algorithmic solution with appropriate control and data structures.
3. Develop intuition to enable students to come up with creative approaches to problems.
4. Develop programs using pointers, structures and unions
5. Manipulation of text data using files

Course Outcomes:

At the end of the course, the student will be able to

1. formulate solutions to problems and represent those using
2. choose proper control statements and use arrays for solving problems.
3. decompose a problem into modules and use functions to implement the
4. apply and use allocation of memory for pointers and solve the problems
5. develop the solutions for problems using C programming Language.

Unit 1 Problem Solving and Introduction to C 12

Steps to solve problems, algorithm, Pseudo code, Flowchart with examples, Program Development Environments. Introduction to programming: Programming languages and generations.
Introduction to C: Introduction, structure of C program, keywords, identifiers, Variables, data types, constants, I/O statements, operators, precedence and associatively.

Unit 2 Introduction to decision control statements and Arrays 8

Selective, looping and nested statements, jumping statements.
Arrays: Introduction, declaration of arrays, accessing and storage of array elements, searching (linear and binary search algorithms) and sorting (selection and bubble) algorithms, multidimensional arrays, matrix operations

Unit 3 Strings and Functions 8

Strings: Declaration and Initialization, String Input / Output functions, String manipulation functions.
Functions: Types of functions, recursion, scope of variables and storage classes.
Preprocessor Directives: Types of preprocessor directives, examples.

Unit 4 Pointers 10

Pointers: Understanding computer's memory, introduction to pointers, declaration pointer variables,

pointer arithmetic, pointers and strings, array of pointers, function pointers, dynamic memory allocation, advantages and drawbacks of pointers

Unit 5 Structures and Files 10

Structures: Structure definition, initialization and accessing the members of a structure, nested structures, array of structures, structures and functions, structures and pointers, self-referential structures, unions and enumerated data types.

Files: Introduction to files, file operations, reading and writing data on files, error handling during file operations.

Prescribed Textbooks:

2. E. Balagurusamy. *C and Data Structures*. Tata McGraw Hill.
3. J. R. Hanly, Ashok N. Kamthane and A. Ananda Rao. *Programming in C and Data Structures*. Pearson Education.

Reference Books:

1. Yashvanth Kanetkar. *LET US C.* 9th Ed., BPB Publication
2. Byron Gottfried. *Schaum's Outline of Programming with C*. McGraw-Hill.
3. Brian W. Kernighan and Dennis M. Ritchie. *The C Programming Language*. Prentice Hall of India.
4. A. K. Sharma. *Computer Fundamentals and Programming.* 2nd Ed., University Press, 2018.
5. Pradeep Dey and Manas Ghosh. *Programming in C*. 2nd Ed., Oxford Press, 2017

Title of the Course: Computer Organization
Category: PC
Course Code: 24BCOM12T
Branch/es: **Computer Science, AI&ML, AI&DA, Programming & Data Science**
Semester: I Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
3	0	0	3

Course Objectives:

1. Illuminate the student to understand the basic concepts of digital number systems and their conversions
2. Allow the students to Design and analyze combinational and sequential logic circuits through formulation of logic functions, Boolean algebra minimization
3. Impart the students to understand the internal organization and operations of a computer
4. Enable the students to acquire knowledge about the concepts of processor logic design and memory organization
5. Allow the students to familiarize the concepts related to IO organization.

Course Outcomes:

At the end of the course, the student will be able to

1. identify the basic structure and functional units of a digital computer
2. solve problems based on computer arithmetic
3. design, Analyze and evaluate different digital circuits using Boolean algebra
4. understand instruction structure and analyze the effect of addressing modes on the execution time of a program
5. understand concepts related to Processor, memory organization and select appropriate interfacing standards for I/O devices

Unit 1 Basic Structure of Computers 12

Computer Types, Functional units, Basic operational concepts, Bus structures, Data Representation: Binary Numbers, Fixed Point Representation. Floating – Point Representation. Number base conversions, Octal and Hexadecimal Numbers, complements, Signed binary numbers, Binary codes.

Unit 2 Digital Logic Circuits 8

Digital Logic Circuits - I: Basic Logic Functions, Logic gates, universal logic gates, Minimization of Logic expressions, Combinational Circuits.
Digital Logic Circuits - II: Flip-Flops, Registers, Shift Registers, Binary counters, Decoders, Multiplexers, Programmable Logic Devices.

Unit 3 Computer Arithmetic and Instruction Set & Addressing 8

Computer Arithmetic: Algorithms for fixed point and floating-point addition, subtraction, multiplication and division operations, Hardware Implementation of arithmetic and logic operations.
Instruction Set & Addressing: Memory Locations and Addresses, Machine addresses and sequencing, Various Addressing Modes, Instruction Formats, Basic Machine Instructions.

Unit 4 Processor Organization and Memory Organization 10

Processor Organization: Introduction to CPU, Register Transfers, Execution of Instructions, Multiple Bus Organization, Hardwired Control, Micro programmed Control

Memory Organization: Concept of Memory, RAM, ROM memories, memory hierarchy, cache memories, virtual memory, secondary storage, memory management hardware.

Unit 5 Input / Output Organization 10

Introduction to I/O, Interrupts- Hardware, Enabling and disabling Interrupts, Device Control, Direct memory access, buses, Interface Circuits, Standard I/O Interfaces.

Prescribed Textbooks:

1. Carl Hamacher, Zvonko Vranesic, Safwat Zaky. *Computer Organization.* 5th Ed., McGraw Hill.
2. Miles Murdocca, Vincent Heuring. *Computer Architecture and Organization- An Integrated Approach.* 2nd Ed., Wiley India.
3. M. Moris Mano. *Computer System Architecture.* 3rd Ed., Pearson.

Reference Books:

1. William Stallings. *Computer Organization and Architecture*. 6th Ed., Pearson.
2. David A. Paterson and John L. Hennessy. *Computer- organization and Design*. Elsevier.
3. Sivarama Dandamudi. *Fundamentals or Computer Organization and Design*. Springer Int. Edition.
4. M. Morris Mano. *Digital* Design. 3rd Ed., Pearson Education/PHI.

Title of the Course: Human Values
Category: HSM
Course Code: 24BUHV11T
Branches: **Computer Science, AI&ML, AI&DA, Programming & Data Science**
Semester: I Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
3	0	0	3

Course Objectives: The course aims to help students recognize the vital interplay between values and skills, promoting sustained happiness and prosperity. It seeks to foster a holistic perspective on life and profession, encouraging value-based living through a clear understanding of human reality and existence. Additionally, the course emphasizes the ethical implications of such an understanding, fostering trustful behaviour, fulfilling human interactions, and a harmonious relationship with nature.

Course Outcomes:
At the end of the course, the student will be able to
1. comprehend the terms like Natural Acceptance, Happiness and Prosperity
2. analyze one's self, and one's surroundings (family, society, nature)
3. apply human values in enriching human relationships and human society.
4. analyze the need for universal human values and harmonious existence.
5. evaluate themselves as socially and ecologically responsible engineers.

Unit 1 Introduction to Value Education 12

Lecture1: Right Understanding, Relationship and Physical Facility (Holistic Development and the Role of Education)
Lecture2: Understanding Value Education
Tutorial 1: Practice Session1: Sharing about oneself
Lecture 3: Self-Exploration as the Process for Value Education
Lecture4: Continuous Happiness and Prosperity – The Basic Human Aspirations
Tutorial 2: Practice Session2: Exploring Human Consciousness
Lecture 5: Happiness and Prosperity – Current Scenario
Lecture 6: Method to Fulfill the Basic Human Aspirations
Tutorial 3: Practice Session3: Exploring Natural Acceptance

Unit 2 Harmony in the Human Being 8

Lecture 7: Understanding Human being as the co-existence of the self and the body.
Lecture 8: Distinguishing between the needs of the self and the body
Tutorial 4: Practice Session4: Exploring the difference of needs of self and body.
Lecture 9: The body as an instrument of the self
Lecture 10: Understanding harmony in the self
Tutorial 5: Practice Session5: Exploring sources of imagination in the self
Lecture 11: Harmony of the self with the body
Lecture 12: Programme to ensure self-regulation and health
Tutorial 6: Practice Session 6: Exploring harmony of self with the body

Unit 3 Harmony in the Family and Society 8

Lecture 13: Harmony in the Family – the Basic Unit of Human Interaction
Lecture 14: 'Trust' – the Foundational Value in Relationship
Tutorial 7: Practice Session7: Exploring the Feeling of Trust
Lecture 15: 'Respect' – as the Right Evaluation
Tutorial 8: Practice Session 8: Exploring the Feeling of Respect
Lecture 16: Other Feelings, Justice in Human-to-Human Relationship
Lecture 17: Understanding Harmony in the Society
Lecture 18: Vision for the Universal Human Order
Tutorial 9: Practice Session9: Exploring systems to fulfil human goal

Unit 4 Harmony in the Nature/Existence 10

Lecture 19: Understanding Harmony in the Nature
Lecture 20: Interconnectedness, Self-Regulation and Mutual Fulfillment among the Four Orders of Nature
Tutorial 10: Practice Session 10: Exploring the Four Orders of Nature
Lecture 21: Realizing Existence as Co-existence at All Levels
Lecture 22: The Holistic Perception of Harmony in Existence
Tutorial 11: Practice Session11: Exploring Co-existence in Existence

Unit 5 Implications of the Holistic Understanding – a Look at Professional Ethics 10

Lecture 23: Natural Acceptance of Human Values
Lecture 24: Definitiveness of (Ethical) Human Conduct
Tutorial 12: Practice Session 12: Exploring Ethical Human Conduct
Lecture 25: A Basis for Humanistic Education, Humanistic Constitution and Universal Human Order
Lecture 26: Competence in Professional Ethics
Tutorial 13: Practice Session13: Exploring Humanistic Models in Education
Lecture 27: Holistic Technologies, Production Systems and Management
Models-Typical Case Studies
Lecture 28: Strategies for Transition towards Value-based Life and Profession
Tutorial 14: Practice Session14: Exploring Steps of Transition towards Universal Human Order

Practice Sessions for UNIT I – Introduction to Value Education
PS1 Sharing about Oneself
PS2 Exploring Human Consciousness
PS3 Exploring Natural Acceptance
Practice Sessions for UNIT II – Harmony in the Human Being
PS4 Exploring the Difference of Needs of Self and Body
PS5 Exploring Sources of Imagination in the Self
PS6 Exploring Harmony of Self with the Body
Practice Sessions for UNIT III – Harmony in the Family and Society
PS7 Exploring the Feeling of Trust
PS8 Exploring the Feeling of Respect
PS9 Exploring Systems to fulfil Human Goal
Practice Sessions for UNIT IV – Harmony in the Nature (Existence)
PS10 Exploring the Four Orders of Nature
PS11 Exploring Co-existence in Existence
Practice Sessions for UNIT V – Implications of the Holistic Understanding – a Look at Professional Ethics
PS12 Exploring Ethical Human Conduct
PS13 Exploring Humanistic Models in Education
PS14 Exploring Steps of Transition towards Universal Human Order

Title of the Course: Communicative English Lab
Category: HSM
Course Code: 24BENG11L
Branches: **Computer Science, AI&ML, AI&DA, Programming & Data Science**
Semester: I Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
0	0	4	2

Course Objectives:
The main objective of Communicative English Laboratory course is to provide students with a range of self-instructional and learner-friendly methods for enhancing their language skills. This course is designed to train students in fundamental communication abilities and prepare them effectively for job interviews.

Course Outcomes:
At the end of the course, the student will be able to
1. relate and differentiate the English speech sounds, stress, rhythm, intonation and syllable division for better listening and speaking comprehension
2. develop effective communication skills through various verbal and non-verbal language learning practices
3. demonstrate professional skills by actively participating role-plays and descriptions
4. build an effective resonate and equip themselves with essential employability skills for professional success
5. enhance public speaking skills and deliver oral presentations with clarity and confidence

List of Topics
1. Phonetics: Vowels & Consonants
2. Just A Minute (JAM)
3. Role Play / Situational Dialogues
4. Oral Presentation/ Poster Presentation
5. Information Transfer
6. Describing people/objects/situations

Suggested Software:
1. Walden Infotech
2. Sky Pronunciation Suite
3. Clarity Pronunciation Power – Part I
4. Learning to Speak English - 4 CDs
5. Loose Your Accent in 28 days, CD Rom, Judy Ravin

Prescribed Textbooks:

Title of the Course: Problem Solving through C Programming Lab
Category: PC
Course Code: 24ACOM11L
Branches: **Computer Science, AI&ML, AI&DA, Programming & Data Science**
Semester: I Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
0	0	4	2

Course Objectives:

1. Setting up programming environment.
2. Develop Programming skills to solve problems.
3. Use of appropriate C programming constructs to implement algorithms.
4. Identification and rectification of coding errors in program
5. Develop applications using modular programming and Manage data using files.

Course Outcomes:

At the end of the course, the student will be able to

1. Identify and setup program development environment
2. Implement the algorithms using C programming language constructs
3. Identify and rectify the syntax errors and debug program for semantic errors
4. Solve problems in a modular approach using functions
5. Implement file operations with simple text data

Unit 1 Data Types, Constants, Input and Output and expressions 12

Exercise 1: Data types, Variables, Constants and Input and Output.
Exercise 2: Operators, Expressions and Type Conversions.

Unit 2 Decision Control Statements and Arrays 8

Exercise 3: Conditional Statements [two way and multipath].
Exercise 4: Loop Control Statements. [for, while and do-While]
Exercise 5: Unconditioned JUMP Statements- break, continue, goto.
Exercise 6: Declaring Arrays, Referencing Arrays, Array Subscripts. Using for loop for sequential Access.
Exercise 7: Multidimensional Arrays

Unit 3 Strings and Functions 8

Exercise 8: String Basics, String Library Functions and Array of Strings.
Exercise 9: Simple user defined functions, Parameter passing methods- pass by value, pass by reference.
Exercise 10: Storage classes- Auto, Register, Static and Extern
Exercise 11: Recursive Functions, Preprocessor commands.
Exercise 12: Array Elements as Function Arguments.

Unit 4 Pointers 10

Exercise 13: Pointers, Dynamic memory allocation and error handling

Unit 5 Structures and Files 10

Exercise 14: Structures
Exercise 15: File handling

Title of the Course: Probability Theory and Statistics
Category: BS
Course Code: 24BMAT21T
Branches: **Computer Science (Honors), AIML, AI&DA, Programming & Data Science**
Semester: II Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
3	0	0	3

Course Objectives: The aim is to introduce the fundamental concepts of probability theory and elucidate probability distributions for problem-solving. This includes describing measures of central tendency, explaining hypothesis testing and confidence intervals for large samples, and detailing the steps for hypothesis testing with small samples.

Course Outcomes:
At the end of the course, the student will be able to
1. describe the fundamental concepts of probability and random variables.
2. apply the probability distribution in real life problems
3. calculate the correlation between two variables
4. Apply estimation techniques and conduct hypothesis tests for large samples.
5. Analyze the effectiveness of various hypothesis testing methods for small samples to derive accurate conclusions

Unit 1 Probability and Random Variables 10

Probability - axioms of probability – addition theorem of probability - conditional probability- multiplication theorem of probability (without proof) - Baye's theorem.
Random variables - discrete and continuous - Distribution functions - Mean and Variance.

Unit 2 Probability distributions 6

Probability distributions – Binomial and Poisson distribution - fitting - normal distribution - their properties.

8

Unit 3 Introduction of statistics

Introduction of Statistics – Mean - Median and Mode for ungrouped and grouped data.
Correlation - correlation coefficient – Karl Pearson's coefficient - Spearman's rank correlation.

Unit 4 Estimation and Testing of hypothesis for large samples 10

Estimation - Point estimation - Interval estimation of one mean (small and large) - one Proportion (large).
Test of Hypothesis: Types of errors, one and two tailed tests, level of significance, single mean -difference of means - single proportion - difference of proportions (large).

Unit 5 Testing of hypothesis for small samples 10

Student t-distribution test for single mean - two means and paired t-test,

Testing of equality of variances (F-test) - χ^2 test for goodness of fit - χ^2 test for independence of attributes.

Reference Books:

1. S. Ross. *a First Course in Probability.* Pearson Education India, 2002.
2. W. Feller. *An Introduction to Probability Theory and its Applications.* 1st Ed., Wiley, 1968.

Title of the Course: Introduction to Python Programming
Category: PC
Course Code: 24BCOM21T
Branches: **Computer Science, AI&ML, AI&DA, Programming & Data Science**
Semester: II Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
2	1	0	3

Course Objectives:

1. To learn basics of computational problem solving, python programming and basic control structures.
2. To know python programming basic constructs like lists, dictionaries, sets and functions
3. To understand basics of object-oriented programming
4. To understand the performance of the implementations of basic data structures.

Course Outcomes:

At the end of the course, the student will be able to

1. Understand Python basics: literals, variables, operators, and control structures.
2. Develop functions, modules, and process strings; learn object-oriented principles.
3. Apply OOP concepts: inheritance, polymorphism, and handle exceptions effectively.
4. Implement advanced data structures: linked lists, stacks, and queues.
5. Utilize tree structures and algorithms: binary trees, search trees.

Unit 1 12

Introduction to python programming language, literals, variables and identifiers, operators, expressions and data types. Control Structures: Control structure importance, Boolean expressions, selection control, and iterative control.

Data Structures in python: List structures, lists in python, iterating over lists (sequences) in python, more on python lists, Dictionary, Set

Unit 2 8

Functions: Program routines, more functions. Module Design: Modules, Top-Down design, python modules. String Processing: String Traversal, String-Applicable Sequence Operations. String Methods

Introduction to Object oriented programming: class, three fundamental features of object-oriented programming. What is encapsulation? Defining classes in python.

Data abstraction and through classes, special methods, calling a class method from another class method, garbage collection, class and static methods.

Unit 3 8

Inheritance: Introduction, Inheriting classes in python, types of inheritance, abstract classes and interfaces. Polymorphism: Operator overloading: Introduction, implementing operator overloading, method overriding.

Error and Exception handling: introduction, handling exceptions, multiple except blocks, multiple exceptions in a single block, the else clause, raising exceptions, instantiating exceptions, handling exceptions in invoked functions, built-in and user defined exceptions, the finally block, Assertions in

python.

Unit 4 10

Data structures: Introduction to abstract data types, Single Linked List-traversing, searching, prepending, and removing nodes. Stacks-implementing using python list & linked list, Queues-implementing using python list & linked list.

Unit 5 10

Binary Trees: The Tree structure, the binary tree, priority queues-heaps Search trees: The binary search tree, search tree iterators, AVL trees

Prescribed Textbooks:

Title of the Course: Object Oriented Programming using C++
Category: PC
Course Code: 24BCOM22T
Branches: **Computer Science, AI&ML, AI&DA, Programming & Data Science**
Semester: II Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
3	0	0	3

Course Objectives:

1. To learn New & Advanced Data Structures
2. To impart the Object-Oriented Concepts in C++
3. To acquire knowledge on Algorithmic Design and Analysis
4. To solve problems Using Different Data Structures and Design Techniques, and Compare their Performance and Tradeoffs
5. To implement pattern matching algorithms and Tree Data Structures in C++

Course Outcomes:

At the end of the course, the student will be able to

1. Able to understand the basic concepts of C++ and its functions
2. Able to understand and apply the Object-Oriented Concepts and performance analysis for algorithms
3. Able to apply and analyze the abstract data types such as Stacks, Queues, and Dictionaries
4. Able to categorize tree data structures such as binary search trees, AVL, Red-black, Splay trees
5. Able to determine pattern matching algorithm efficiencies.

Unit 1 INTRODUCTION TO C++: 12

Introduction, Class Overview: Class, Objects, Class Members, I/O Streams, Access Control, Class Scope, Static Class Members: Static Member Variables, Static Member Functions, Static Object, Functions: Parameter Passing Methods, Inline Functions, The Friend Function, This Pointer, Dynamic Memory Allocation and Deallocation: New Operator, Delete Operator, Exception Handling.

Unit 2 OBJECT ORIENTED CONCEPTS 8

Constructors, Constructor Overloading, Destructors, Function Overloading, Operator Overloading: Plus, Minus, Unary, Inheritance: Base Class Access Control, Types of Inheritance, Reasons for the usage of Inheritance, Polymorphism: Virtual Functions, Pure Virtual Functions, Abstract Classes, Generic Programming with Templates: Function Templates, Class Templates.
Algorithms: Performance Analysis, Space Complexity, Time Complexity: Bubble Sort, Selection Sort.

Unit 3 STACKS, QUEUES AND DICTIONARIES: 8

Stack ADT, Queue ADT, Operations of Stack & Queue ADT
Dictionaries, Linear List Representation, Skip List Representation: Operations, Searching, Insertion, Deletion, Hash Table: Hash Functions, Collisions: Separate Chaining, Open Addressing - Linear Probing, Quadratic Probing, Double Hashing or Rehashing, Extendible Hashing, Comparison of Chaining and Open Addressing.

Unit 4 PRIORITY QUEUES, SEARCH TREES (PART I): 10

Priority Queue ADT, Priority Queue Implementation Using Heaps, External Sorting.

Binary Search Trees ADT, Representation of Binary Search Tree, Operations on Binary Search Trees: Insertion, Deletion and Searching, AVL Trees, Operations of AVL Trees: Insertion, Deletion and Searching.

Unit 5 SEARCH TREES (PART II) AND PATTERN MATCHING 10

Introduction to Red–Black and Splay Trees, B-Trees, Operations on B-Trees: Insertion, Deletion and Searching, Height of B Tree.

Pattern Matching Algorithms, Fixed Pattern Matching Algorithms: Brute Force, Boyer–Moore, Knuth-Morris-Pratt Algorithms.

Prescribed Textbooks:

Title of the Course: Data Ware Housing & Data Mining
Category: PC
Course Code: 24BCOM23T
Branches: **Computer Science, AI&ML, AI&DA, Programming & Data Science**
Semester: II Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
3	0	0	3

Course Objectives:

1. Learn the types of data to be mined and apply preprocessing methods on raw data.
2. To design data warehouses and techniques for mining frequent patterns, associations, and correlations.
3. To understand different classification algorithms and estimate the accuracy of algorithms.
4. To inculcate knowledge on different clustering algorithms.
5. To identify the various types of complex data and its applications.

Course Outcomes:

At the end of the course, the student will be able to

1. understand and apply the data preprocessing techniques.
2. design data warehouses and techniques for mining frequent patterns, associations, and correlations.
3. solve different classification problems and estimate the accuracy of classification algorithms.
4. understand and analyze different clustering techniques.
5. create various types of complex data such as spatial, text and multimedia.

Unit 1 INTRODUCTION: 12

Fundamentals of data mining, Data Mining Functionalities, Classification of Data Mining systems, Major issues in Data Mining.

Data Preprocessing: Needs Preprocessing the Data, Data Cleaning, Data Integration and Transformation, Data Reduction, Discretization and Concept Hierarchy Generation.

Unit 2 WARE HOUSING, MINING ASSOCIATION RULES IN LARGE DATABASES: 8

Data Warehouse and OLAP Technology for Data Mining Data Warehouse, Multidimensional Data Model, Data Warehouse Architecture, From Data Warehousing to Data Mining.

Basic Concepts and a Road Map, Efficient and Scalable Frequent Item set Mining Methods, Mining Various Kinds of Association Rules, From Association Mining to Correlation Analysis.

Unit 3 CLASSIFICATION AND PREDICTION 8

Issues Regarding Classification and Prediction, Classification by Decision Tree Induction, Bayesian Classification, Classification by Back propagation, Other Classification Methods, Prediction, Classifier Accuracy

Unit 4 CLUSTER ANALYSIS INTRODUCTION 10

Types of Data in Cluster Analysis, A Categorization of Major Clustering Methods, Partitioning Methods, Hierarchical Methods Density-Based Methods, Grid-Based Methods, Model-Based Clustering Methods,

Outlier Analysis.

Unit 5 MINING COMPLEX TYPES OF DATA AND DATA MINING APPLICATIONS: 10

Mining Spatial Databases, Mining Multimedia Databases, Mining Text Databases, Mining theWorld Wide Web, Data Mining Applications.

Prescribed Textbooks:

1. Jiawei Han &Micheline Kamber. *Data Mining Concepts and Techniques.* 2nd Ed., 2006.

Reference Books:

Title of the Course: Environmental Studies
Category: BS
Course Code: 24BENS21T
Branches: **Computer Science, AI&ML, AI&DA, Programming & Data Science**
Semester: II Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
3	0	0	3

Course Objectives: This course aims to raise awareness among students about the environment and the critical need to protect natural resources. It emphasizes the significance of ecosystems and biodiversity, while sensitizing students to the pollution challenges caused by everyday human activities. Additionally, the course equips students with the skills to identify and address social issues related to the environment.

Course Outcomes: At the end of the course, the student will be able to

1. explain how natural resources should be utilized with a focus on sustainability.
2. describe the need to protect ecosystems and biodiversity for future generations.
3. comprehend major pollution problems related to ecosystems.
4. apply quantitative reasoning skills in the proper utilization of goods and services.
5. analyze the interconnectedness of human dependence on Earth's ecosystems.

Unit 1 Multidisciplinary Nature of Environmental Studies 10

Definition, Scope and Importance – Need for Public Awareness. Natural resources: Renewable and non-renewable resources – Forest resources: Uses, deforestation– Water resources: Uses, floods, drought – Mineral resources: Uses, environmental effects of extracting mineral resources – Food resources: Impacts of overgrazing, problems with traditional agriculture, effects of modern agriculture – Land Resources: Land degradation, soil erosion Energy resources: Renewable and non-renewable energy resources.

Unit 2 Ecosystems, Biodiversity and its Conservation 10

Ecosystems: Producers, consumers and decomposers – Food chains, food webs and ecological pyramids – Introduction, types, characteristic features, structure and function of the following ecosystem: Forest ecosystem, lake ecosystem.
Biodiversity and Its Conservation: Definition – Value of biodiversity. Hot-spots of biodiversity – Threats to biodiversity – Conservation of biodiversity.

Unit 3 Environmental Pollution 8

Definition, Causes, effects and control measures of: Air Pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, nuclear hazards. Solid waste management: Causes, effects and control measures of urban and industrial wastes. e-waste: sources and health hazards. Need for e-waste management – recycling.

Unit 4 Social Issues and the Environment 10

Rain water harvesting, Environmental ethics: Issues and possible solutions – global warming, acid rain, ozone layer depletion – Environment Protection Act – Air (Prevention and Control of Pollution) Act – Water (Prevention and control of Pollution) Act – Wildlife Protection Act – Forest Conservation Act.

Unit 5 Human Population and the Environment 8

Population explosion – Family Welfare Programmes – Environment and human health – Value Education – HIV/AIDS – Role of information Technology in Environment and human health, Field work – Visit to a local area to document environmental assets

Title of the Course: Python Programming Lab
Category: PC
Course Code: 24BCOM21L
Branches: **Computer Science, AI&ML, AI&DA, Programming & Data Science**
Semester: II Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
0	0	4	2

Course Objectives:

1. To practice basics of python programming and basic control structures.
2. To practice python programming basic constructs like lists, dictionaries, sets and functions
3. To practice module design and usage of exception handling in python programming
4. To practice basics of object-oriented programming and elementary data structures.

Course Outcomes:

At the end of the course, the student will be able to

1. Apply basics of python programming
2. Write programs on the basic object-oriented programming in python language, handling of exceptions
3. Implement linear data structure in python programming
4. Develop and write programs for priority queues
5. Construct and write the implementation of binary search tree

List of Programs

Exercise 1: Install Python ecosystem and execute “Hello World” program.

Exercise 2: Practice

a) Python literals, variables, identifiers and data types
b) Python operators
c) Input and output statements.
d) Control statements

Exercise 3: Practice Python Programs on Numbers

a) Prime Numbers
b) Armstrong Numbers
c) Fibonacci Numbers and Series
d) Sum of squares for the first n natural numbers.
e) Reverse of a number

Exercise 4: Practice python programs on Various types of triangle patterns

Exercise 5: Implement python programs on functions, find factorial and Fibonacci number using recursion

Exercise 6: Practice python programs on lists, sets and dictionaries

Exercise 7: Practice any one python program on module design

Exercise 8: Practice python programs on string processing and exception handling

Exercise 9: Practice Python Programs

a) Write python program to implement encapsulation and abstraction
b) Write a python program to implement class variables and object variables

Exercise 10: Practice Python Programs

a) Write a python program to implement static variables and static methods.
b) Write a python program to implement super ()
c) Write a python program to implement types of inheritance

Exercise 11: Practice python programs

a) Write a python program to implement the method overloading and method overriding.
b) Write a python program to implement the abstract classes and interfaces.

Exercise 12: Implement python programs on

a) Stacks
b) Queues

Exercise 13: Implement Single linked list data structure.

Exercise 14: Implement priority queue data structure.

Exercise 15: Implement binary search tree data structure.

Prescribed Textbooks:

1. Charles Dierbach*, Introduction to Computer Science Using Python: A Computational Problem-Solving Focus*.
2. Rance D. Necaise, *Data Structures and Algorithms using Python*, Wiley Publications.

Title of the Course: Object Oriented Programming using C++ Lab
Category: PC
Course Code: 24BCOM22L
Branches: **Computer Science, AI&ML, AI&DA, Programming & Data Science**
Semester: II Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
0	0	4	2

Course Objectives:

1. To make the student learn an object-oriented way of solving problems.
2. To make the student write ADTs for all data structures.
3. To make the student learn different algorithm design techniques.

Course Outcomes:

At the end of the course, the student will be able to

1. Able to know about Object oriented programming concepts like Encapsulation, Constructors & Destructor, function overloading
2. Able to construct OOP concepts like Operator overloading, inheritance, and polymorphism
3. Able to use Abstract Data Types for data structures with templates
4. Able to design the different trees and their operations
5. Able to understand the implementation of Pattern Matching Algorithm

Week1:

a) Write a C++ program to implement the access control.
b) Write a C++ program to implement the static member function.
c) Write a C++ program to implement the parameter passing.

Week2:

a) Write a C++ program to implement the friend function.
b) Write a C++ program to implement the inline method.
c) Write a C++ program to implement dynamic memory allocation and deallocation.

Week 3:

a) Write a C++ program to implement the exception handling.
b) Write a C++ program to implement the constructor overloading.
c) Write a C++ program to implement the function overloading.

Week4:

a) Write a C++ program to implement the Operator overloading.
b) Write a C++ program to implement the simple inheritance.
c) Write a C++ program to implement multiple inheritance.

Week5:

a) Write a C++ program to implement the virtual function.
b) Write a C++ program to implement the abstract class.
c) Write a C++ program to implement the class template.

Week6: Write a C++ programs to implement the following using an array.

a) Stack ADT
b) Queue ADT

Week7: Write a C++ programs to implement the following using a singly linked list.

a) Stack ADT
b) Queue ADT

Week8: Write a C++ program to implement all the functions of a dictionary ADT using hashing.

Week9: Write a C++ program to perform the following operations on Binary Trees.

a) Insertion
b) Deletion
c) Searching

Week10: Write C++ programs to perform the traversals for the given binary tree.

a) Preorder
b) inorder
c) postorder

Week11: Write C++ programs for priority queue implementation using Heaps.

a) Min Heap Insertion
b) Min Heap Deletion
c) Max Heap Insertion
d) Max Heap Deletion

Week12: Write a C++ program to perform the following operations on Binary SearchTrees.

a) Insertion
b) Deletion
c) Searching

Week13: Write a C++ program to perform the following operations on B-Trees.

a) Insertion
b) Deletion
c) Searching

(Note: Use Class Templates for the above Data Structure Programs)

Prescribed Textbooks:

1. Adam Drozdek. *Data Structures and Algorithms in C++.* 3rd Ed., Thomson, 2007.

Title of the Course: Operating Systems
Category: PC
Course Code: 24BCOM31T
Branches: **Computer Science, AI&ML, AI&DA, Programming & Data Science**
Semester: III Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
3	0	0	3

Course Objectives: The goal is to provide a comprehensive understanding of operating system architecture and its functions, with a focus on gaining knowledge in process and thread synchronization, scheduling, paging, memory management techniques, and file system concepts. Additionally, the aim is to explore deadlock operations and gain insights into protection and security within operating systems.

Course Outcomes:
At the end of the course, the student will be able to
6. understand the fundamental concepts of operating systems
7. explain the concepts of process management and threads.
8. describe efficient utilization of memory Management and file system techniques.
9. analyze and investigate the impacts of deadlocks.
10. understand security and Protection mechanisms in operating systems

Unit 1 Operating Systems Overview 9
Introduction, what operating systems do? Computer system Organization & architecture, Operating system operations.
Systems structures: Operating system services, systems calls, types of System calls.

Unit 2 Process Management 12
Process concepts; process Scheduling, operations on process, Process Scheduling Basic Concepts, Scheduling Criteria, scheduling algorithms, IPC, communication in Client-Server systems.

Unit 3 Memory Management 12
Swapping, contiguous memory allocation, paging, structure of the page table, segmentation, Demand paging, page-replacement algorithms
File System: File Concept, access methods, file allocation methods in disk Space, disk scheduling

Unit 4 Principles of Deadlock 9
System model, deadlock characterization, deadlock prevention, detection and avoidance, recovery form deadlock.

Unit 5 I/O Systems 9

I/O Hardware, Transforming I/O requests to hardware operations.
Protection: Protection, Goals of Protection, Principles of Protection.
Security: The Security problem, program threats, system and network threats, firewalls to protect systems and networks.

Prescribed Textbooks:

1. Abraham Silberchatz, Peter B. Galvin, Greg Gagne, *Operating System Concepts*. 10th Ed., John Wiley.

Title of the Course: Introduction to Artificial Intelligence
Category: PC
Course Code: 24BCOM35T
Branches: **AIML, AI&DA, Programming & Data Science**
Semester: III Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
3	0	0	3

Course Objectives: This course aims to provide a comprehensive understanding of the foundational building blocks of Artificial Intelligence (AI) through the concept of intelligent agents. It explores key approaches in AI, including heuristic search, game search, and logical inference, while delving into decision theory and planning processes for agents. Additionally, the course focuses on analyzing various types of objects and scenarios in uncertain environments and equipping learners with the ability to identify solutions using reasoning in the context of uncertain knowledge.

Course Outcomes:
At the end of the course, the student will be able to
1. understand the importance of artificial Intelligence in real world environment
2. apply the artificial intelligence algorithms for problem solving
3. analyze the various reasoning and knowledge representation techniques
4. solve the problems using classification and planning techniques
5. apply knowledge and reasoning techniques in uncertain environment for the obtain solutions

Unit 1 Introduction to Artificial Intelligence 9
Introduction to AI, History of AI, Emergence of Intelligent Agents, and Intelligent Agents: PEAS-Representation for an Agent, Types of Agents, Types of Agent Environments, Concept of Rational Agent, Structure of Intelligent agents, defining the Problem as a State Space Search, Problem Characteristics.

Unit 2 Problem Solving 9
Solving problems by searching, Problem Formulation, Uninformed Search Techniques -DFS, BFS, Informed search methods –heuristic Functions, Hill Climbing, A*,Performance Evaluation. Constrained Satisfaction Problems: Constraint Satisfaction Problems like – map Coloring, Back tracking for CSP, Local Search.

Unit 3 Knowledge and Reasoning
A knowledge Based Agent, Introduction to Logic, Propositional Logic, Reasoning in Propositional logic, First Order Logic: Syntax and Semantics, Extensions and Notational Variation, Inference in First Order Logic, Unification, Forward and Back ward chaining, Resolution.

Unit 4 Knowledge Engineering and Planning 9
Knowledge Engineering: Ontology, Categories and Objects, Mental Events and Objects.
Planning: Planning problem, Planning with State Space Search, Partial Order Planning, Hierarchical Planning, Conditional Planning.

9

Unit 5 Uncertain Knowledge and Reasoning

Uncertain Knowledge and Reasoning: Uncertainty, Acting Under Uncertainty, Basic Probability Notation, The Axioms of Probability, Inference Using Full Joint Distributions, Independence, Bayes Rule and Its Use.

Branches: **Computer Science, AI&ML, AI&DA, Programming & Data Science**
Semester: III Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
3	0	0	3

Course Objectives: The course aims to develop the foundational understanding of discrete mathematics essential for computer science and engineering students. It enables students to formulate and analyze compound propositions using truth tables and logical equivalences, integrate concepts from sets and functions to solve engineering problems, and derive closed-form solutions of linear recurrence relations using various methods. The course also aims to build awareness of the fundamental concepts of graph theory and trees, along with their applications in computing and problem-solving contexts.

Course Outcomes:
At the end of the course, the student will be able to
1. describe the logical connectives in inference theory
2. explain relations, functions in computer science and engineering.
3. solve the various types of recurrence relations in engineering
4. apply graph theory concepts in network analysis
5. apply the properties of trees in minimization of the path distance.

Unit 1 Mathematical Logic 10
Introduction, Statements and Notation, Connectives-negation, conjunction, disjunction, conditional and bi-conditional, Well-formed formulas, Tautology, Duality law, Equivalence, Implication, Normal Forms, Inference Theory of Statement Calculus.

Unit 2 Relations and functions 10
Relations and functions: Operations on Relations, Properties of binary relations in a set, relation matrix and the graph of a relation, partition and covering of a set, equivalence relations, compatibility relations, partial ordering, Hasse diagram, functions - composition of functions, inverse functions and recursive functions.

Unit 3 Recurrence Relations 8
Generating Functions of Sequences, Calculating Coefficients of Generating Functions and Recurrence Relations-Solving homogeneous and non-homogeneous Recurrence Relations by Substitution and Generating functions and Characteristic roots method.

Unit 4 Graph theory 8
Definitions, finite and infinite graphs, incidence and degree, isolated pendant vertices, isomorphism, sub graphs, walk, path and circuit, connected and disconnected graphs, components, Euler graphs, Euler graph theorem, operations on graphs, arbitrarily traceable Euler graphs, Hamiltonian paths and circuits, travelling salesman problem.

8

Unit 5 Trees

Some properties of trees, pendant vertices, distance and centres, rooted and binary trees, spanning trees, fundamental circuit, shortest spanning trees, Kruskal's algorithm.

Title of the Course: Object Oriented Modeling and Design
Category: PC
Course Code: 24BCOM33T
Branch/es: **Computer Science, AI&ML, AI&DA, Programming & Data Science**
Semester: III Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
3	0	0	3

Course Objectives: The course aims to help students understand the role and significance of modeling in software development. It aims to teach the principles of object-oriented modeling and how to apply them using UML. The course aims to cover the various building blocks and architecture of UML to enable effective software system modeling. It aims to develop the ability to design and interpret UML structural diagrams such as class, object, and component diagrams. Additionally, it aims to provide practical knowledge of behavioural modeling through use case, sequence, collaboration, and state chart diagrams. The course also aims to foster understanding of deployment and architectural diagrams and their importance in system implementation. Ultimately, it aims to equip students with the skills to apply UML modeling techniques to real-world software problems, bridging the gap between system requirements and implementation.

Course Outcomes:
At the end of the course, the student will be able to

1. Understand the fundamental concepts of modeling, its importance in software engineering, and the principles of object-oriented modeling.
2. Analyze and construct detailed structural models using advanced class features, relationships, interfaces, roles, and packages.
3. Identify and describe system functionality using use cases and actors.
4. Demonstrate understanding of dynamic system behavior using activity diagrams, state machines, and state chart diagrams.
5. Design and interpret component diagrams to illustrate system components and their interfaces.

Unit 1 Introduction to UML 12

Importance of modeling, principles of modeling, object-oriented modeling, An overview of UML, Building Blocks of UML, Architecture, SDLC, Classes – Terms and Concepts, Common Modeling Techniques, Relationships.

Unit 2 Structural Modeling 8

Advanced classes, advanced relationships, Interfaces, Types and Roles, Packages, Instances**, Class Diagrams** – Terms, concepts for Class Diagram.

Unit 3 Basic Behavioural Modeling 8

Use cases – Terms and Concepts, **Use case Diagrams** – Terms and Concepts, **Sequence Diagrams** – Terms and Concepts, Collaboration Diagrams – Terms and Concepts.

Unit 4 Advanced Behavioral Modeling 10

Activity Diagrams – Terms and Concepts, Events and Signals, State Machines, Processes and Threads, Time and Space, State Chart Diagrams - Terms and Concepts.

Unit 5 Architectural Modeling 10

Component Diagrams – Terms and Concepts, Deployment Diagrams – Terms and Concepts.

Semester: III Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
3	0	0	3

Course Objectives: This course aims to provide an understanding of protocol layering and physical-level communication, along with the ability to analyze network performance. It covers the functions of the network layer and various routing protocols, while also familiarizing students with the transport layer's roles and protocols like TCP and UDP. Additionally, it explores the working of application layer protocols such as HTTP, FTP, and DNS, enabling a deeper insight into how networks support seamless data communication.

Course Outcomes:
At the end of the course, the student will be able to

1. classify the different aspects of networks, protocols and network design models.
2. examine various Data Link layer design issues and Data Link protocols.
3. analyze, Compare and select appropriate routing algorithms for a network.
4. examine the various end to end protocols helps in analyzing and interpreting the quality of networks.
5. analyze the various application protocols over internet.

Unit 1 Introduction to Networks and Physical Layer 9
Network hardware, Network software, OSI, TCP/IP Reference models, Example Networks: ARPANET, Internet. Physical Layer: Guided Transmission media: twisted pairs, coaxial cable, fiber optics, Wireless transmission.

Unit 2 Data Link Layer 9
Data link layer: Design issues, framing.
Elementary data link protocols: simplex protocol, Sliding Window protocols- A one-bit sliding window protocol.
Medium Access sub layer: The channel allocation problem, Multiple access protocols: ALOHA, Carrier sense multiple access protocols.

Unit 3 Network Layer 9
Design issues, Routing algorithms: shortest path routing, Flooding, Hierarchical routing, Broadcast, Multicast, distance vector routing, Quality of Service, Internetworking, The Network layer in the internet.

Unit 4 Transport Layer 9
Transport Services, Elements of Transport protocols, Connection management, TCP and UDP protocols.

Unit 5 Application Layer 9
Domain name system, SNMP, Electronic Mail; the World WEB, HTTP.

Title of the Course: Essence of Indian Traditional Knowledge
Category: MC
Course Code: 24BETK31T
Branches: **Computer Science, AI&ML, AI&DA, Programming & Data Science**
Semester: III Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
2	0	0	0

Course Objectives: The objective is to learn the basic principles of thought process, reasoning, and inference, sustainability at the core of Indian Traditional Knowledge Systems that connect society and nature. It also aims to understand the holistic lifestyle of Yogic science and the wisdom capsules found in Sanskrit literature, especially in the context of modern society marked by rapid technological advancements and societal disruptions. Furthermore, it emphasizes understanding the Indian Knowledge System, the Indian perspective on the modern scientific worldview, and the foundational principles of Yoga and holistic healthcare. Additionally, it includes exploring Indian philosophical traditions, linguistic traditions, and artistic heritage.

Course Outcomes:
At the end of the course, the student will be able to

1. Understand the hidden scientific outlook and imbibed human values in the Indian way of life.
2. Understand the essence of Vedas and their value
3. Establish connection between Indian knowledge system and Modern science.
4. Explain basics of Indian artistic, linguistic and philosophical tradition
5. Explain basics of philosophical tradition.

Unit 1 Indian Tradition 9

Fundamental unity of India, India's heroic role in world civilization, The Indian way of life, Introduction to Indian tradition, The Scientific Outlook and Human Values.

Unit 2 Basic structure of Indian Knowledge System 9

Indian Traditional Scriptures, Exposure to 4-Vedas (the Rigveda, the Yajurveda, the Samaveda and the Atharvaveda) , 4-Upvedas (Ayurveda, Dhanurveda, Gandharvaveda, Sthapatya etc.), 6-Vedangas (Shiksha, Kalp, Nirukta, Vyakaran, Jyotish), 6-Upangas (Dharmashastra, Meemansa, Puranas, Tarkashastra/Logic) etc.

Unit 3 Indian Knowledge System and Modern Science 9

Relevance of Science and Spirituality, Science and Technology in Ancient India, Superior intelligence of Indian sages and scientists.
Indian Traditional Health Care: Importance and Practice of Yoga, Pranayama and other prevailing health care techniques..

Unit 4 Indian Artistic and Linguistic Tradition 9

Indian Artistic Tradition: Introduction and overview of significant art forms in ancient India such as

painting, sculpture, Civil Engineering, Architecture, Music, Dance, Literature etc.
Indian Linguistic Tradition: Ancient Indian languages and literary Heritages, Phonology, Morphology, Syntax and Semantics..

Unit 5 Indian Philosophical Tradition 9

Indian Philosophical Tradition: (Sarvadarshan)- Nyaya, Viaisheshiika, Sankhya, Yoga, Meemansa, Brief understanding of Philosophy of Charvaka, Bhagwan Mahaveer Jain, Bhagwan Buddha, Kabeer, Guru Nanak Dev and other eminent ancient Indian Philosophers.
Activities: Activities will consist of one assignment on each module, group discussions, presentations, case study on various topics based on above curriculum.

Prescribed Textbooks:

Title of the Course: Artificial Intelligence Lab
Category: PC
Course Code: 24BCOM35L
Branches: **AIML and AI&DA**
Semester: III Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
0	0	4	2

Course Objectives: This course is designed to equip students with the knowledge and skills to analyze various artificial intelligence (AI) techniques and methodologies. Students will gain a comprehensive understanding of implementing key AI approaches, including heuristic search methods and techniques for solving constraint satisfaction problems. Additionally, the course focuses on the implementation of game-playing algorithms, enabling students to design intelligent systems capable of strategic decision-making. Through practical applications and problem-solving, students will develop a strong foundation in core AI concepts and their real-world applications.

Course Outcomes:
At the end of the course, the student will be able to
1. understand artificial intelligence techniques
2. solve the problems using different heuristic search techniques
3. implement the algorithms for game playing

List of Experiments:

1. Write a program to implement chat box.
2. Write a program to solve any problem using Depth First Search.
3. Write a program to solve any problem using Breadth First Search.
4. Write a program to implement Water jug problem.
5. Write a program to implement A* search
6. Write a program to implement Crypt arithmetic using Constraint satisfaction problem
7. Write a program to implement Hill climbing Search
8. Write a program to implement 8-Puzzle game
9. (Note: Program scan be implemented using Java/Python/PROLOG)

Course Objectives: The course aims to help students understand the core principles and significance of modeling in software development. It aims to enable students to create structural diagrams, including class diagrams, to represent the static aspects of a system. The course aims to develop students' ability to create use case and sequence diagrams to effectively model system interactions and behavior. It also aims to teach the design of advanced behavioral models using activity diagrams to capture dynamic workflows and processes. Additionally, it aims to guide students in designing component and deployment diagrams to illustrate the architectural and physical deployment aspects of software systems.

Course Outcomes:
At the end of the course, the student will be able to

1. Creating UML diagrams using standard UML modeling tools
2. Design class diagrams with complex relationships, interfaces, and packages.
3. Apply skills in representing dynamic behaviors of systems through use case, sequence, and collaboration diagrams.
4. Apply activity and state chart diagrams to model workflows and system states
5. Design component and deployment diagrams

Select at least 3 from the following and design UML Diagrams:

1. Online Railway Reservation System
2. Library management system
3. Hospital Management System
4. ATM Model
5. College Management System

Prescribed Textbooks:

1. Grady Booch, James Rumbaugh, Ivar Jacobson, *The Unified Modeling Language User Guide*. 2nd Ed., Pearson Education, 2007.

Branches: **Computer Science, AI&ML, AI&DA, Programming & Data Science**
Semester: IV Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
3	0	0	3

Course Objectives: Developing effective web pages involves a comprehensive understanding of HTML, CSS, JavaScript, and XML. HTML provides the foundational structure, enabling the creation of tables and form controls to organize content and facilitate user interactions. CSS is employed to design and style these web pages, ensuring a responsive and visually appealing layout. JavaScript is utilized to validate form inputs, enhancing user experience by providing immediate feedback and preventing erroneous data submissions. Additionally, XML can be used to structure and transport data, allowing for the design of web pages that efficiently handle and display complex information. By integrating these technologies, developers can create dynamic, well-structured, and user-friendly web applications.

Course Outcomes:
At the end of the course, the student will be able to
1. apply the fundamental HTML markups when designing web pages.
2. apply Tables and forms controls to design web pages.
3. apply cascading style sheets to design web pages
4. apply JavaScript concepts in designing web pages.
5. apply XML features for developing web pages.

Unit 1 10
Introduction to HTML, Tags and Elements, Basic Text Formatting, Understanding Block and Inline Elements, Text Processing tags, Links and Navigation: Basic Links, Understanding Directories and Directory Structures, Understanding URLs, Creating In-Page Links with the <a> Element.

Unit 2 6
Tables: Introducing Tables, Basic Table Elements and Attributes, adding a Caption to a Table, Grouping Sections of a Table, Forms: Introducing Forms, creating a Form with the <form> Element, Form Controls, Creating Labels for Controls and the <label> Element, Frames.

Unit 3 8
Cascading Style Sheets: Introducing CSS, Types of CSS, Text Formatting, Styling Text, Backgrounds, Lists.

Unit 4 Introduction to JavaScript 10
Introduction to JavaScript, Declaring Java Script Variables, Basics of JavaScript, Control Structures, Pop Up

Boxes, Functions, Arrays, Events, Objects.

Unit 5 Introduction to XML 10

XML: Introduction, Document Type Definition, XML Schema, Document Object Model, Presenting XML (XSL), XML Parsers: DOM and SAX.

Prescribed Textbooks:

Semester: III/IV Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
3	0	0	3

Course Objectives: The software life cycle is a structured process for developing, deploying, and maintaining software through stages like requirement gathering, design, implementation, testing, deployment, and maintenance. Process models such as Waterfall, Agile, and Spiral provide frameworks to manage these stages based on project needs. Gathering requirements ensures alignment with user needs, while effective designs at various levels create scalable systems. Testing strategies like unit, integration, and acceptance testing ensure software quality. Development and maintenance focus on implementation and updates to ensure reliability and longevity.

Course Outcomes:
At the end of the course, the student will be able to
1. understand the software process models importance.
2. analyze software requirements through elicitation, specification, and validation techniques based on requirements engineering principles.
3. understand the software architecture with various design approaches.
4. design user interfaces by applying established principles, analysis techniques, and structured design steps.
5. analyze the maintenance of a software project.

Unit 1 Software and Software Engineering 12

Software and Software Engineering: The Nature of Software, Software Engineering, Software Process, Software Engineering Practice, Software Myths.
Process Models: A Generic Process Model (framework), Process Assessment and Improvement, Prescriptive Process Models, The Unified Process.

Unit 2 8

Understanding Requirements: Requirements Engineering, Software Requirement Specification, Eliciting requirements, and Validating Requirements.
System Modeling: Context models, Behavioral models, Data models, Object models, Structured Methods.

Unit 3 8

Design Concepts: Design Concepts. Architectural Design: Software Architecture, Architectural Styles, Architectural Design, Assessing Alternative Architectural Designs, Design Evaluation.

Unit 4 10

User Interface Design: The Golden Rules, User Interface Analysis and Design, Interface Design Steps.
Testing: Unit Testing, Black-Box Testing, White-Box Testing, Integration Testing, System Testing.

Unit 5 10

Project Management: The Management Spectrum, People, Product, Process, Project, Project Planning, Project Scheduling.

Risk Management: Risk Identification, Risk Projection, Risk Refinement, Risk Mitigation, Monitoring, and Management, The RMMM Plan

Prescribed Textbooks:

Course Objectives: The objective of the course Design and Analysis of Algorithms is to introduce fundamental algorithm design techniques such as divide and conquer, greedy methods, and dynamic programming. It aims to develop students' ability to analyze the efficiency of algorithms in terms of time and space complexity. The course encourages the application of algorithms to solve real-world computational problems, particularly those relevant to Artificial Intelligence and Machine Learning. Additionally, it fosters strong problem-solving skills through the design and evaluation of optimal and efficient algorithms.

Course Outcomes:
At the end of the course, the student will be able to

1. understand the performance of algorithms in terms of time and space complexity
2. apply divide and conquer to solve searching and sorting problems and greedy method to solve job sequencing with deadline.
3. analyze dynamic programming technique to solve knapsack, shortest path, travelling sales person problems.
4. understand and solve different applications of backtracking, and branch and bound techniques
5. understand and remember concepts of computational theory.

Unit 1 12

Algorithm, Pseudo Code for algorithms, performance analysis-Space complexity, Time Complexity, Asymptotic Notation-Big Oh Notation, Omega Notation, Theta notation and Little Oh notation, Sets-Disjoint set operations, Union and Find algorithms.

Unit 2 8

Divide and Conquer: General Method, applications- Binary Search, Quick sort, Merge Sort.
Greedy Method: General Method, Prim's algorithm, Kruskal's algorithm, Single Source Shortest Paths-Dijkstra's algorithm

Unit 3 8

Dynamic Programming: General Method, applications-, Optimal Binary search trees, 0/1 Knapsack, All pairs shortest path: Floyd Warshal's, The Travelling person problem.

Unit 4 10

Backtracking: General Method, applications- N- queen problem, sum of subsets, graph coloring, Hamiltonian cycles.

Branch and Bound: General Method, applications, 0/1 knapsack problem-LC Branch and Bound Solution, FIFO Branch and Bound solution.

Unit 5 10

The classes: P-Class, NP-Class, Non-deterministic algorithms, NP-Hard Class and NP Complete Class, Cook's Theorem.

Title of the Course: Numerical Methods
Category: BS
Course Code: 24BMAT41T
Branches: **Computer Science, AI&ML, AI&DA, Programming & Data Science**
Semester: IV Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
3	0	0	3

Course Objectives: The objective of the Numerical Methods course is to introduce students to numerical techniques for solving algebraic and transcendental equations, and to familiarize them with interpolation methods for estimating values between known data points. The course also aims to explain various numerical approaches for evaluating definite integrals and solving ordinary differential equations. Additionally, it describes the applications of numerical methods in solving partial differential equations, equipping students with practical tools for computational problem-solving in scientific and engineering contexts.

Course Outcomes:
At the end of the course, the student will be able to
1. solve algebraic and transcendental equations using numerical methods .
2. solve the simultaneous equations using numerical methods .
3. apply interpolation techniques to solve real-world problems by estimating intermediate values from discrete data points.
4. evaluate differentiation and integration of a function using numerical technique.
5. solve the ordinary differential equations using numerical methods .

Unit 1 Solutions of algebraic and transcendental equations 12
Bisection method - Regula-Falsi method - The Iteration Method-Newton-Raphson method.

Unit 2 Numerical solutions of simultaneous equations and Eigen value problems 10
Introduction, Gaussian elimination method, Gauss-Jordan elimination method. Iterative methods: Gauss Jacobi iteration method, Gauss-Seidel iteration method. Power method for determining the largest eigen values.

Unit 3 Interpolation and Curve fitting 8
Interpolation: Finite differences - forward differences and backward differences - Newton's forward interpolation formula - Newton's backward interpolation formula - Lagrange's interpolation formula.
Curve fitting: Fitting a straight line-second degree parabola-Exponential curve –power curve by the method of least squares.

Unit 4 Numerical Differentiation and Numerical integration 8
Numerical Differentiation, Numerical integration - Trapezoidal rule - Simpson's 1/3rd and Simpson's 3/8 rules.

Unit 5 Numerical solutions of ordinary differential equations of first order 10

Picard's method -Taylor's series- Euler's method - Modified Euler's method - Runge-Kutta method of fourth order

Semester: IV Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
3	0	0	3

Course Objectives: The course aims to provide a solid understanding of IoT fundamentals, including connectivity, data exchange, and automation. It covers IoT architecture and protocols, focusing on device communication within networks. Students will gain hands-on experience by building embedded systems with Raspberry Pi to design IoT solutions. The course also explores real-world IoT applications in industries like healthcare, agriculture, and smart cities, bridging theory with practical implementation.

Course Outcomes: At the end of the course, the student will be able to

1. Describe the physical and logical design of IoT systems, enabling technologies, levels of deployment, templates.
2. Develop Web services to access/control IoT devices.
3. Design a portable IoT using Raspberry Pi.
4. Deploy an IoT application and connect to the cloud.
5. Analyze applications of IoT in real time scenario.

Unit 1 Introduction to IOT **10**

Internet of Things - Physical Design- Logical Design- IoT Enabling Technologies - IoT Levels & Deployment Templates - Domain Specific IoTs.

Unit 2 IOT Architecture **10**

M2M high-level ETSI architecture - IETF architecture for IoT - OGC architecture - IoT reference model - Domain model - Information model - Functional model - Communication model - IoT Reference architecture.

Unit 3 IOT Protocols **8**

Protocol Standardization for IoT – Efforts – M2M and WSN Protocols – SCADA and RFID Protocols – Unified Data Standards – Protocols – IEEE 802.15.4 – BACNet Protocol – Modbus– Zigbee Architecture – Network layer- 6LowPAN - CoAP – Security.

Unit 4 Building IOT with Raspberry PI **10**

Building IOT with RASPBERRY PI- IoT Systems - Logical Design using Python – IoT Physical Devices & Endpoints - IoT Device -Building blocks

Unit 5 Case Studies and Real-World Applications **8**

Real world design constraints - Applications - Asset management, Industrial automation, Smart grid, Commercial building automation, Smart cities - Participatory sensing - Data Analytics for IoT – Software &

Management Tools for IoT Cloud Storage Models & Communication APIs - Cloud for IoT - Amazon Web Services for IoT.

Title of the Course: Constitution of India
Category: MC
Course Code: 24BCOI41T
Branches: **Computer Science, AI&ML, AI&DA, Programming & Data Science**
Semester: IV Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
2	0	0	0

Course Objectives: The course aims to provide an understanding of the importance of the Constitution and the structure of the executive, legislature, and judiciary. It explores the philosophy behind fundamental rights and duties, and the autonomous nature of constitutional bodies such as the Supreme Court, High Court, CAG, and Election Commission. The course also highlights the financial and administrative relations between the Union and State governments. Overall, it fosters awareness of constitutional governance in India.

Course Outcomes: At the end of the course, the student will be able to

1. Understand the historical background of the constitution making and its importance for building a democratic India.
2. Understand the functioning of three wings of the government, i.e., executive, legislative and judiciary
3. Understand the value of the fundamental rights and duties for becoming good citizens of India
4. Understand the decentralization of power between union, state and local self-government
5. Understand the operation of constitutional institutions like CAG, Election Commission and UPSC for sustaining democracy

Unit 1 **10**

IntroductiontoIndianConstitution:Constitution,meaningoftheterm,IndianConstitution-Sourcesand Constitutional history, Features Citizenship, Preamble, Fundamental Rights and Duties, Directive Principles of State Policy.

Unit 2 **10**

Union Government and its Administration Structure of the Indian Union: Federalism, Centre – State relationship, President: Role, power and position, PM and Council of ministers, Cabinet and Central Secretariat, LokSabha, Rajya Sabha, The Supreme Court and High Court: Powers and Functions.

Unit 3 **8**

State Government and its Administration – Governor – Role and Position – CM and Council of ministers, State Secretariat: Organization, Structure and Functions

Unit 4 **10**

Local Administration – District Administration Head – Role and Importance, Municipalities – Mayor and role of Elected Representative – CEO of Municipal Corporation Panchayati Raj: Functions PRI: Zila Panchayat, Elected officials and their roles, CEO Zila Panchayat: Block level Organization all Hierarchy -

(Different departments), Village level – Role of Elected and Appointed officials – Importance of grass root democracy.

Unit 5 **8**

Election Commission: Election Commission – Role of Chief Election Commissioner and Election Commissionerate State Election Commission: Functions of Commissions for the welfare of SC/ST/OBC and women.

0	0	4	2

Course Objectives: Developing effective web pages involves a comprehensive understanding of HTML, CSS, JavaScript, and XML. HTML provides the foundational structure, enabling the creation of tables and form controls to organize content and facilitate user interactions. CSS is employed to design and style these web pages, ensuring a responsive and visually appealing layout. JavaScript is utilized to validate form inputs, enhancing user experience by providing immediate feedback and preventing erroneous data submissions. Additionally, XML can be used to structure and transport data, allowing for the design of web pages that efficiently handle and display complex information. By integrating these technologies, developers can create dynamic, well-structured, and user-friendly web applications.

Course Outcomes:
At the end of the course, the student will be able to
1. apply the fundamental HTML markups when designing web pages.
2. design the web pages with Tables and forms controls
3. implement cascading style sheets to design web pages
4. interpret and use JavaScript concepts in designing web pages.
5. apply XML features for developing web pages.

List of Programs

1) a) Develop an HTML page using various basic tags.
   b) Develop an HTML page using text processing tags.
2) Write an HTML page using Links concept.
3) Develop your class timetable using Tables concept.
4) Design Registration Form using various form controls.
5) Design a web page using Embedded Cascading Style Sheet.
6) Design a web page using External Cascading Style Sheet.
7) Develop a web page using various Lists.
8) Develop java script application to declare variables.
9) Design java script application using arrays concept
10) Write an XML file which will display the Books information and also XSLT Program to display XML Data in HTML document which includes:

1) Title of the book 2) Author Name 3) Publisher 4) Edition 5) Price

Prescribed Textbooks:

Course Objectives: The course aims to apply software engineering principles to real world scenarios and projects. To Enable students to understand and document both functional and non-functional requirements various system modeling techniques effectively. To Develop skills in making critical architectural decisions that influence the overall system structure. To Apply verification, validation, and testing concepts to real-world software projects through hands-on exercises and projects. To Apply project management, planning, scheduling, risk management, and cost estimation concepts to real-world software projects.

Course Outcomes:
At the end of the course, the student will be able to
1. Comprehend various requirements needed to develop software.
2. Apply various process models for developing software
3. Apply different modular decomposition styles for developing software architecture

Design and Develop following applications:
1. Online Railway Reservation System
2. Payroll processing application
3. Inventory system.
4. Automating the banking process.
5. Software for game
6. Library management system
7. Create a dictionary
8. Text editor
9. Telephone directory
10. Create an E-Book of your choice

Course Objectives: This course aims to introduce the fundamental concepts and paradigms of Machine Learning, including data types, feature engineering, model learning, evaluation, and prediction. It focuses on distance-based, tree-based, probabilistic, and linear discriminant learning models for classification and regression. The course also provides knowledge of supervised and unsupervised learning techniques, including clustering methods, to analyze and solve real-world data problems.

Course Outcomes:

1. Understand the evolution, paradigms, and stages of Machine Learning.
2. Apply distance and proximity-based learning models for classification and regression.
3. Design and analyze decision tree and probabilistic classifiers.
4. Apply linear discriminant-based models including SVMs and neural networks.
5. Apply suitable clustering techniques for unsupervised data analysis.

Unit 1 Introduction to Machine Learning 12

Evolution of Machine Learning, Paradigms for ML, Learning by Rote, Learning by Induction, Reinforcement Learning, Types of Data, Matching, Stages in Machine Learning, Data Acquisition, Feature Engineering, Data Representation, Model Selection, Model Learning, Model Evaluation, Model Prediction, Search and Learning, Data Sets.

Unit 2 Nearest Neighbor-Based Models 11

Introduction to Proximity Measures, Distance Measures, Non-Metric Similarity Functions, Proximity

Between Binary Patterns, Different Classification Algorithms Based on the Distance Measures, K-Nearest Neighbor Classifier, Radius Distance Nearest Neighbor Algorithm, KNN Regression, Performance of Classifiers, Performance of Regression Algorithms.

Unit 3 Models Based on Decision Trees 11

Decision Trees for Classification, Impurity Measures, Properties of the Decision tree Classifier, Regression Based on Decision Trees, Bias–Variance Trade-off, Random Forests for Classification and Regression. The Bayes Classifier: Introduction to the Bayes Classifier, Bayes' Rule and Inference, The Bayes Classifier and its Optimality, Multi-Class Classification, Class Conditional Independence and Naive Bayes Classifier (NBC).

Unit 4 Linear Discriminants for Machine Learning 12

Introduction to Linear Discriminants, Linear Discriminants for Classification, Perceptron Classifier, Perceptron Learning Algorithm, Support Vector Machines, Linearly Non-Separable Case, Non-linear SVM, Kernel Trick, Logistic Regression, Linear Regression, Multi-Layer Perceptrons (MLPs), Backpropagation for Training an MLP.

Unit 5 Clustering 12

Introduction to Clustering, Partitioning of Data, Matrix Factorization, Clustering of Patterns, Divisive Clustering, Agglomerative Clustering, Partitional Clustering, K-Means Clustering, Soft Partitioning, Soft Clustering, Fuzzy C-Means Clustering, Rough Clustering, Rough K-Means Clustering Algorithm, Expectation Maximization-Based Clustering, Spectral Clustering.

Branch B.Sc. (AIML,AI&DA)

Year: III **Year**

Semester: V Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
3	0	0	3

Course Objectives: This course aims to introduce the fundamentals of Artificial Intelligence, Machine Learning, and Deep Learning along with the required mathematical and statistical foundations. It focuses on understanding neural networks, their architectures, and learning processes. The course also emphasizes training deep neural networks using optimization techniques and applying Convolutional Neural Networks for computer vision tasks.

Course Outcomes:

At the end of the course, the student will be able to

1. Summarize the concepts of AI, Machine Learning and Deep Learning along with basic linear algebra and statistical foundations.
2. Explain machine learning paradigms, model evaluation techniques, and limitations of machine learning systems.
3. Describe the structure and learning process of artificial neural networks and their activation functions.
4. Apply backpropagation, optimization, regularization, and normalization techniques for training deep neural networks.
5. Analyze and apply Convolutional Neural Networks for computer vision applications such as image processing and object detection.

Unit 1 Introduction 13

Introduction: Artificial intelligence, Machine Learning, and Deep Learning, Research Domains and Industry Applications, Tools in Technologies. **Mathematics for Deep learning:** Linear Algebra – Matrix, Vector, Transpose, Tensor, Operations on the elements. **Statistics:** Probability, Random variables, Binomial , Poisson, Normal , Sampling distributions, sampling, Central Limit theorem, x- square distribution, t – test distribution, f-distribution, hypothesis testing.

Unit 2 Introduction to Machine Learning 12

Introduction to Machine Learning: Introduction, Machine Learning versus Traditional Computer Programming, types of Machine Learning, Evaluating the Model- Supervised Learning, Unsupervised Learning, Model Representation and Interpretability, Major Limitations of Machine Learning.

Unit 3 Fundamentals of Neural Networks 11

Fundamentals of Neural Networks: Introduction, Understanding the Biological Neuron, Exploring the Artificial Neuron, Early implementation of ANN, types of activation functions, Architectures of Neural Network, Learning process of ANN.

Unit 4 Training Deep Neural Networks 11

Training Deep Neural Networks: Introduction, Mathematics Behind Back propagation, Deep L -Layer Neural Network, Understanding the Notion of Forward and Backward, Initializing Weights in Neural Network, Batch, Mini-batch and Stochastic Gradient Descent, Other Optimization Algorithms, Regularization, Normalization of Inputs.

Unit 5 Computer Vision using Convolutional Neural Networks 12

Computer Vision using Convolutional Neural Networks: Introduction to computer vision, how the Computer See the world, Building Blocks of Convolutional Neural Network, Building Convolutional Network, Popular CNN Architectures, Object Detection, Essential Pre-processing Tasks in Computer Vision.

Title of the Course: PHP with MySQL

Category: PC

Course Code: 24BAIL53T

Branches B.Sc. (AIML, Programming & Data Science)

Year: III **Year**

Semester: V Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
3	0	0	3

Course Objectives: This course aims to build a strong foundation in PHP for dynamic web development by covering core concepts such as variables, data types, functions, arrays, and object-oriented features. It enables students to create and process interactive web forms, manage user input, and integrate HTML with PHP effectively. Learners will gain skills in file and directory handling, including reading, writing, and validating files. The course also introduces executing system commands and managing server-side resources. Students will learn to connect PHP applications with MySQL databases for efficient data storage and retrieval. Additionally, the course develops analytical thinking through basic probability concepts and Bayes' rule for data-driven decision-making.

Course Outcomes:

At the end of the course, the student will be able to

1. Apply basic PHP syntax, variables, data types, operators, functions, and scope.
2. Use arrays, objects, strings, and date–time functions for data handling.
3. Create and process dynamic forms, manage input, state, email, and file uploads.
4. Perform file, directory, and system command operations using PHP.
5. Integrate PHP with MySQL and apply basic probability and inference concepts.

Unit 1 Basic Building Blocks of PHP 12

Introduction to PHP, PHP Data Types, Identifiers, Variables, Constants, Expressions. Working With Functions: Creating a Function, Passing Arguments by Value, Passing Arguments by Reference, Default Argument values, Returning values from a function.

Unit 2 Working With Arrays 12

Introduction to Arrays, Creating an Arrays, Creating Arrays with array(), Extracting Arrays with list(), Populating Arrays with a predefined value Range, Testing of an Array. Outputting an Array: Printing Arrays for Testing Purpose. Adding and Removing Array Elements: Adding a value to the Front of an Array, Adding a Value to the end of an array, Removing a value from the front of an array, Removing a

value from the end of the array.

Unit 3 Object-Oriented PHP 11

The Benefits of OOPs, Encapsulation, Inheritance, Polymorphism. Key OOP Concepts: Classes, Objects, Constants, Methods, Constructors and Destructors, Static Class Members.

Unit 4 Working with Files and Directories 11

Introduction to File and Directories, Parsing Directory Paths, Calculating File, Directory, and Disk Sizes, Determining Access and Modification Times. Working with Files: The concept of a Resource, Recognizing Newline Characters, Recognizing the End-of-File Character, Opening and Closing a File, Reading from a File Writing a String to a File, Moving the File pointer, Reading Directory Contents.

Unit 5 Interacting with MySQL using PHP 13

Introduction to MYSQL, What Makes MySQL so popular?, Flexibility, Power. The Evolution of My SQL: My SQL 4, MySQL 5, MySQL 5.1, MySQL 5.4 AND 5.5. Installing and Configuring MySQL: Downloading MySQL, Installing MySQL, Installing and Configuring MySQL on Windows.

Text Book:

Title of the Course: Differential Equations

Category: BS

Course Code: 24BMAT51T

Branches: **Computer Science, AI&ML, AI&DA, Programming & Data Science**

Year: III **Year**

Semester: V Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
3	0	0	3

Course Objectives: This course aims to develop fundamental understanding of ordinary and partial differential equations and their solution techniques. It enables students to handle first-order and higher-order differential equations and apply them to physical and engineering problems. The course also introduces methods for solving partial differential equations arising in practical situations.

Course Outcomes:

At the end of the course, the student will be able to

1. Solve first-order differential equations using standard solution methods.
2. Determine complementary functions and particular integrals of higher-order linear differential equations.
3. Compute particular integrals using operator methods and variation of parameters.
4. Apply differential equations to model growth, cooling, motion, and electrical circuits.
5. Solve first-order partial differential equations using standard techniques

Unit 1 First Order Differential Equations 11

Formation of differential equations, First order and first-degree equations, Solution of a differential equations-Variables separable, Homogeneous equations, Exact differential equations, Linear differential equations, Bernoulli's equation.

Unit 2 Applications of first order Differential Equations 12

Applications of first order Differential Equations- Orthogonal trajectories (in cartesian form), Newton's law of cooling, Law of natural growth or decay

Unit 3 Linear differential equations of higher order with constant coefficients 12

Basic concepts - general solution-operator D-rules for finding complimentary function-inverse operator-rules for finding particular integral for RHS term of the type e^{ax}, $\sin ax / \cos ax$, polynomials in x, $e^{ax} \sin a\,x / e^{ax} \cos a\,x / e^{ax} x^n$, Method of variation of parameters

Unit 4 Linear differential equations of higher order with variable coefficients 11

Linear differential equations with variable coefficients, The Cauchy - Euler Equation, Legendre's Linear Equations. Applications: Electric Circuits-L-C and L-C-R circuit problems.

Unit 5 Partial Differential Equations 12

Formation of Partial Differential Equations PDEs, Linear PDEs of first order, Lagrange's method, Charpit's method (simple cases).

Title of the Course: Natural Language Processing
Category: PE
Couse Code: 24BCOM5CT
Branches: B.Sc.(Computer Science , AIML)

Year: III Year

Semester: V Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
3	0	0	3

Course Objectives: The learner will be able to explain and apply fundamental algorithms and techniques in Natural Language Processing (NLP), demonstrating a clear understanding of core concepts and practical implementations. They will develop knowledge of syntactic and semantic approaches used in NLP for analyzing language structure and meaning. The learner will also understand statistical methods employed in machine translation and gain insight into modern language modeling techniques used for processing and generating human language effectively.

Course Outcomes:
At the end of the course, the student will be able to
1. Explain core NLP concepts and linguistic foundations.
2. Apply grammar and parsing techniques for syntactic analysis.
3. Analyze language structures using advanced parsing methods.
4. Interpret semantic representations and resolve ambiguity.
5. Develop and evaluate language models for multilingual applications.

Unit 1 Introduction to Natural language 12

The Study of Language, Applications of NLP, Evaluating Language Understanding Systems, Different Levels of Language Analysis, Representations and Understanding, Organization of Natural language Understanding Systems, Linguistic Background: An outline of English Syntax.

Unit 2 Grammars and Parsing 12

Grammars and Parsing- Top- Down and Bottom-Up Parsers, Transition Network Grammars, Feature Systems and Augmented Grammars, Morphological Analysis and the Lexicon, Parsing with Features, Augmented Transition Networks.

Unit 3 Grammars for Natural Language 10

Grammars for Natural Language, Movement Phenomenon in Language, Handling questions in Context Free Grammars, Human Preferences in Parsing, Shift Reduce Parsers, Deterministic Parsers.

Unit 4 Semantic Interpretation 12

Semantic Interpretation: Semantic & Logical form, Word senses & ambiguity, The basic logical form language, Encoding ambiguity in the logical Form, Verbs & States in logical form, Thematic roles, Speech acts & embedded sentences, Defining semantics structure model theory.

Unit 5 Linking Syntax and Semantics 12

Linking Syntax and Semantics: semantic interpretation and Compositionality, A simple Grammar and Lexicon with semantic Interpretation, Prepositional Phrase and Verb Phrases, Lexicalized semantic Interpretation and Semantic Roles.

Title of the Course:	Quantum Computing
Category:	PE
Couse Code:	24BCOM5BT
Branch:	**Computer Science, AI&ML, AI&DA, Programming & Data Science**
Year:	III **Y**ear
Semester:	V Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
3	0	0	3

Course Objectives:

This course aims to introduce the interdisciplinary foundations of quantum computing, develop mathematical and physical understanding of qubits and quantum circuits, explore major quantum algorithms and complexity concepts, and provide knowledge of quantum error correction, information theory, and cryptographic applications. Understand the fundamentals of linear algebra, Hilbert space, quantum physics principles

Course Outcomes

At the end of the course, the student will be able to

1. Explain the history and interdisciplinary importance of quantum computing
2. Apply mathematical and physical concepts relevant to quantum systems.
3. Understand physical implementation of Qubit
4. Analyze quantum algorithms and their computational advantages.
5. Understand the Impact of Quantum Computing on Cryptography

UNIT 11

History of Quantum Computing: Importance of Mathematics, Physics and Biology. Introduction to Quantum Computing: Bits Vs Qubits, Classical Vs Quantum logical operations

UNIT 2 12

Background Mathematics: Basics of Linear Algebra, Hilbert space, Probabilities and measurements. Background Physics: Paul's exclusion Principle, Superposition, Entanglement and super-symmetry, density operators and correlation, basics of quantum mechanics, Measurements in bases other than computational basis. Background Biology: Basic concepts of Genomics and Proteomics (Central Dogma)

UNIT 3 11

Qubit: Physical implementations of Qubit. Qubit as a quantum unit of information. The Bloch sphere Quantum Circuits: single qubit gates, multiple qubit gates, designing the quantum circuits. Bell states.

UNIT 4 11

Quantum Algorithms: Classical computation on quantum computers. Relationship between quantum and classical complexity classes. Deutsch's algorithm, Deutsch's-Jozsa algorithm, Shor's factorization algorithm, Grover's search algorithm.

UNIT 5 12

Noise and error correction: Graph states and codes, Quantum error correction, fault-tolerant computation. Quantum Information and Cryptography: Comparison between classical and quantum information theory. Quantum Cryptography, Quantum teleportation.

Text Book:

Course Objectives: The objective of this course is to introduce the fundamentals of Data Science, history, key terminologies, process models and real-world applications, to develop the complete data science process, including defining research goals, data collection, data cleaning, integration, transformation and exploratory data analysis. It seeks to equip machine learning concepts, modeling processes and the use of Python tools for building, executing and evaluating models techniques and tools for handling large-scale data, including appropriate data structures, distributed frameworks, and NoSQL databases. Text mining and data visualization techniques and to understand application development.

Course Outcomes:

At the end of the course, the student will be able to

1. Explain the fundamentals, terminology, process models, and applications of Data Science
2. Apply the define research goals and perform data collection, cleaning, transformation and analysis
3. Understand machine learning concepts and Python tools to build, execute and evaluate models
4. Analyze large datasets using appropriate data structures, tools, frameworks and NoSQL databases
5. Apply text mining and data visualization techniques to develop and interpret data science applications

Unit 1 **Introduction to Data Science** 12

Introduction, History of Data Science, Increasing Attention to Data Science, Fundamental Fields, Data Science Terminologies, Types of Analytics, Applications of Data Science, Process Model

Unit 2 **Data Science Process** 11

Overview of the Data Science Process, Defining Research goals, Retrieving data, Cleansing, Integrating and Transforming data, exploratory data analysis

Unit 3 **Machine Learning** **12**

Machine Learning in data science, Python tools, Modelling process, Build the models: Variable selection, Model execution, model diagnostics, Types of Machine Learning

Unit 4 **Handling the Large Data sets** 11

General techniques for Handing Large data: Choosing the right data structure, Selecting the right tools, Tips for dealing with large data, Distributing data storage and processing with Frameworks, NoSQL Database

Unit 5 **Text mining, Visualization and Applications** 12

Text Mining, Text mining Techniques, Technologies for visualization, various visualization techniques, Applications of Data Science, application development methods of used in data science

Text Book:

1. Davy Cielen ,Arno D.B.Meysman and Mohamed Ali. Introducing Data Science. 1st Ed., Dreamtech press, 2023.

Course Objectives: This course aims to introduce the fundamental concepts and paradigms of Machine Learning, including data types, feature engineering, model learning, evaluation, and prediction. It focuses on distance- based, tree-based, probabilistic, and linear discriminant learning models for classification and regression. The course also provides knowledge of supervised and unsupervised learning techniques, including clustering methods, to analyze and solve real-world data problems.

Course Outcomes:

At the end of the course, the student will be able to

1. Understand the evolution, paradigms, and stages of Machine Learning.
2. Apply distance and proximity-based learning models for classification and regression.
3. Design and analyze decision tree and probabilistic classifiers.
4. Apply linear discriminant-based models including SVMs and neural networks.
5. Apply suitable clustering techniques for unsupervised data analysis.

List of Experiments:

Note: Any 8 programs to be performed.

1. Compute Central Tendency Measures: Mean, Median, Mode Measure of Dispersion: Variance, Standard Deviation.
2. Apply the following Pre-processing techniques for a given dataset.

a) Attribute selection

b) Handling Missing Values

c) Discretization

d) Elimination of Outliers

3. Apply KNN algorithm for classification and regression.
4. Demonstrate decision tree algorithm for a regression problem.
5. Apply Random Forest algorithm for classification and regression.
6. Demonstrate Naïve Bayes Classification algorithm.

7. Apply Support Vector algorithm for classification.

8. Demonstrate simple linear regression algorithm for a regression problem.

9. Apply Logistic regression algorithm for a classification problem.

10. Demonstrate Multi-layer Perceptron algorithm for a classification problem.

Course Objectives: The objective of these programs is to help students understand core PHP concepts such as conditional logic, state management, and array handling, while developing skills in form processing, data insertion, user redirection, and email handling. These exercises enable learners to build dynamic, interactive, and state-aware PHP web applications using real-time server-side programming techniques.

Course Outcomes:

At the end of the course, the student will be able to

1. Apply PHP conditional statements and functions to solve basic programming problems
2. Demonstrate effective state management techniques using functions and hidden fields.
3. Design and manipulate single and multidimensional arrays for structured data processing
4. Develop PHP applications that handle form input, perform data insertion, and control user navigation.
5. Implement dynamic web features like file handling, redirection, and email using PHP.

List of Experiments:

Note: Any 10 programs to be performed.

1. Write a program to find big among four numbers.
2. Write a program for Demonstrating Data Types, Variables, Constants.
3. Write a program for Function with Arguments and Return Value.
4. Write a program for Creating and Printing Arrays.
5. Write a program for Adding and Removing Elements
6. Write a program for Class and Object.
7. Write a program for Constructor and Inheritance
8. Write a program for Encapsulation and Static Members.
9. Write a program for Writing and Reading a File.
10. Write a program for Reading Directory Contents.
11. Write a program for Connecting to MySQL.
12. Write a program to Insert and Display Data.

Text Book:

Title of the Course: Soft Skills
Category: SEC
Couse Code: 24BENG51S
Branches: **Computer Science, AI&ML, AI&DA, Programming & Data Science**
Semester: V Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
1	0	2	2

Course Objectives:
This course aims to promote all-round development of students by strengthening soft skills, developing critical thinking and problem-solving abilities, fostering healthy interpersonal relationships, and enabling effective collaboration within diverse and heterogeneous teams in professional environments.

Course Outcomes:
At the end of the course, the student will be able to

1. Describe methods for building professional image
2. Apply critical thinking skills in problem solving
3. Analyze the needs of an individual and team for well-being
4. Evaluate the situation and take necessary decisions
5. Create a productive workplace atmosphere using social and work-life skills ensuring personal and emotional well-being

Unit 1 12

Soft Skills & Communication Skills

Soft Skills - Introduction, Need - Mastering Techniques of Soft Skills – Communication Skills -Significance, Process, Types - Barriers to Communication - Improvising Techniques.

Activities:

Intrapersonal Skills- Narration about self- strengths and weaknesses- Clarity of thought – Self- expression – Articulating with felicity.
(The facilitator can guide the participants before the activity citing examples from the lives of the great, anecdotes and literary sources)
Interpersonal Skills- Group Discussion – Debate – Team Tasks - Book and film Reviews by groups - Group leader presenting views (non- controversial and secular) on contemporary issues or on a given topic.
Verbal Communication- Oral Presentations- Extempore- Brief addresses and speeches- Convincing- Negotiating- Agreeing and disagreeing with professional grace.
Non-verbal communication – Public speaking – Mock interviews – Presentations with an objective to identify non- verbal clues and remedy the lapses on observation.

Unit 2 12

Critical Thinking

Active Listening – Observation – Curiosity – Introspection – Analytical Thinking – Open-mindedness – Creative Thinking - Positive Thinking - Reflection

Activities:

Gathering information and statistics on a topic - Sequencing – Asserting – Reasoning – Critiquing issues – Placing the problem – Finding the root cause - Seeking viable solution – Judging with rationale – Evaluating the views of others - Case Study, Story Analysis

Unit 3 11

Problem Solving & Decision Making

Meaning & Features of Problem Solving – Managing Conflict – Conflict resolution – Team building - Effective decision making in teams – Methods & Styles

Activities:

Placing a problem which involves conflict of interests, choice and views – Formulating the problem – Exploring solutions by proper reasoning – Discussion on important professional, career and organizational decisions and initiate debate on the appropriateness of the decision.
Case Study & Group Discussion

Unit 4 12

Emotional Intelligence & Stress Management

Managing Emotions – Thinking before Reacting – Empathy for Others – Self-awareness – Self-Regulation – Stress factors – Controlling Stress – Tips

Activities:

Providing situations for the participants to express emotions such as happiness, enthusiasm, gratitude, sympathy, and confidence, compassion in the form of written or oral presentations.
Providing opportunities for the participants to narrate certain crisis and stress –ridden situations caused by failure, anger, jealousy, resentment and frustration in the form of written and oral presentation, organizing debates

Unit 5 11

Corporate Etiquette

Etiquette- Introduction, Concept, Significance - Corporate Etiquette - meaning, modern etiquette, benefits - Global and Local Culture Sensitivity - Gender Sensitivity - Etiquette in Interaction- Cell phone Etiquette - Dining Etiquette - Netiquette - Job Interview Etiquette - Corporate Grooming tips -Overcoming challenges

Activities

Providing situations to take part in the Role Plays where the students will learn about bad and good manners and etiquette - Group Activities to showcase gender sensitivity, dining etiquette etc. -
Conducting mock job interviews - Case Study - Business Etiquette Games

NOTE-:

1. The facilitator can guide the participants before the activity citing examples from the lives of the great, anecdotes, epics, scriptures, autobiographies and literary sources which bear true relevance to the prescribed skill.
2. Case studies may be given wherever feasible for example for Decision Making- The decision of King Lear.

Title of the Course: DevOps

Category: PE

Couse Code: 24BAIL6AT

Branch: AIML

Year: III Year

Semester: VI Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
3	0	0	3

Course Objectives: To understanding of DevOps concepts, practices, and culture, and their role in improving collaboration between development, operations, and business teams. The course focuses on building a strong DevOps foundation through business case development, optimizing delivery pipelines, enabling innovation using modern architectures, and scaling DevOps across enterprises. It also aims to equip learners with leadership skills required to drive DevOps adoption as an organizational transformation by promoting continuous improvement, collaboration, and innovation.

Course Outcomes:

At the end of the course, the student will be able to

1. Understand and explain DevOps principles, practices, culture, and their impact on software delivery and business performance.
2. Develop a DevOps business case and apply the Business Model Canvas to align DevOps initiatives with organizational objectives.
3. Analyze and optimize software delivery pipelines using DevOps plays to improve efficiency, quality, and speed.
4. Apply DevOps strategies to drive innovation through platforms, microservices architectures, and modern technologies.
5. Lead and scale DevOps adoption in enterprises by implementing effective team models, governance, security, and continuous improvement practices.

Unit 1 11

Dev Ops: An Overview, Dev Ops: Origins, Dev Ops: Roots, Dev Ops: Practices Dev Ops: Culture. Adopting Dev Ops: Developing the Playbook. Developing a Business Case for a Dev Ops: Developing the Business Case.

Unit 2 12

Completing the Business Model Canvas, Customer Segments, Value Segments, Value Propositions, Channels, Customer Relationships, Revenue Streams, Key Resources, Key Activities, Key Partnerships, Cost Structures. Dev Ops Plays for Optimizing the delivery Pipeline.

Unit 3 12

Dev Ops Plays for Driving Innovation: Optimize to Innovate, The Uber Syndrome, Innovation and the Role of Technology, Core Themes, play: Build a Dev Ops Platform, play: Deliver Micro services Architectures.

Unit 4 12

Scaling Dev Ops for the Enterprise: Core Themes, play: Dev Ops Centre of Competency, play: Developing Culture of Innovation at Scale, play: Developing a Culture of continuous Improvement, play: Team Models for Dev Ops, play: Standardization of Tools and Process, play: Security Considerations for Dev Ops, Play: Dev Ops and Outsourcing.

Unit 5 11

Leading Dev Ops Adoption in the Enterprise: Play: Dev Ops as a transformation Exercise, play: Developing a Culture of Collaboration and Trust, play: Dev Ops Thinking for the Line of Business, play: starting with Pilot Projects, Play: Rearing Unicorns on an Aircrafts Carrier.

Title of the Course: Cloud Computing

Category: PE

Couse Code: 24BAIL6BT

Branches: B.Sc. (AIML, AI & DA, Programming & Data Science)

Year: III Year

Semester: VI Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
3	0	0	3

Course Objectives: This course introduces the basic concepts, features, and services of cloud computing and explains key technologies like virtualization, load balancing, scalability, and monitoring. Students learn about major cloud platforms and tools used in industry and how to design and develop cloud applications using suitable architectures and data storage methods. The course also covers the basics of cloud security. It highlights the use of cloud computing in real-time areas such as healthcare, education, transportation, and manufacturing.

Course Outcomes:

At the end of the course, the student will be able to

1. Explain the basics, features, services, and uses of cloud computing
2. Describe important technologies used in cloud computing.
3. Identify different cloud service platforms and tools
4. Apply cloud design principles to develop cloud applications.
5. Understand cloud security and its use in real-time applications.

Unit 1 CLOUD COMPUTING 11

Introduction, Characteristics of cloud computing, Cloud Models- Service Models, Deployment Model, Cloud services Examples- Iaas, Paas, Saas, Cloud – based Services & Applications of Cloud Computing.

Unit 2 CLOUD COMPUTING & TECHNOLOGIES 12

Virtualization, Load Balancing, Scalability & Elasticity, Deployment, Replication, Monitoring, Software Defined Networking, Service Level Agreements, Billing.

Unit 3 CLOUD SERVICE PLATFORMS 12

Compute Services: Amazon Elastic Compute Cloud, Google Compute Engine, Windows Azure Virtual Machines, Storage Services, Database Services, Application Services, Content Delivery Services, Open

Source Private Cloud Software.

Unit 4 DEVELOPING FOR CLOUD 11

Cloud Application Design: Introduction, Design Considerations for Cloud Applications, Cloud Application Design Methodologies: Service Oriented Architecture, Cloud component Model, Iaas, Paas, Saas Services, Data Storage Approaches: Relational, Non-Relational Approach .

Unit 5 CLOUD SECURITY & CLOUD FOR REAL TME 12

Cloud Security: Introduction, CSA Cloud Security Architecture, Authentication, Authorization.
Cloud for Real time: Cloud Computing Healthcare, Transportation Systems, Education, Manufacturing Industry.

Title of the Course: Human Computer Interaction

Category: PE

Couse Code: 24BAIL6CT

Branch: B.Sc. (AIML)

Year: III Year

Semester: VI Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
3	0	0	3

Course Objectives: This course aims to introduce the fundamentals of Human–Computer Interaction by studying human cognitive, emotional, and psychological aspects and their influence on interactive system design. It focuses on interaction models, ergonomics, and user-centered design processes for creating effective interfaces. The course also emphasizes usability engineering, design rules, evaluation techniques, universal design principles, and user support systems, enabling students to design, implement, and evaluate interactive and collaborative systems.

Course Outcomes:
At the end of the course, the student will be able to
1. Understand human cognitive, psychological, and emotional factors and their role in designing interactive systems.
2. Explain interaction models, ergonomics, and user-centered design processes, including navigation, screen layout, and prototyping.
3. Apply usability engineering principles, design rules, standards, and heuristics in the software development process.
4. Implement and evaluate user interfaces using appropriate tools, evaluation techniques, and universal design principles.
5. Design effective user support, communication, and collaborative systems considering diverse users and interaction modes.

Unit 1 Foundations of HCI 12

Human: Introduction, Input – output channels, Human memory, Thinking: reasoning and problem solving, Emotion, Psychology and the design of interactive systems. **Computer**: Introduction, text entry devices, positioning, pointing and drawing, Display devices, Devices for virtual really and 3D interaction, Physical devices, sensors and special devices.

Unit 2 Interaction & Design Process 12

Interaction: Introduction, Models of interaction, frameworks and HCI, Ergonomics, Interaction Styles, Elements of WIMP interface, Interactivity. **Design Process:** What **is** Design, Process of design, user focus, Navigation Design, Screen design and Layout, Iteration and Prototyping.

Unit 3 HCI in the Software Process & Design Rules 11

HCI in the Software Process: The Software Life Cycle, Usability engineering, Iterative design and prototyping, Design rationale. **Design Rules:** Principles to support usability, Standards, Guide lines, Golden rules and heuristics, HCI patterns.

Unit 4 Implementation Support - Evaluation techniques and Universal design 12

Implementation Support: Elements of windowing systems, Programming the application, Using toolkits, User interface management systems. **Evaluation techniques:** What **is** Evaluation and Goals of evaluation, Evaluation through expert analysis, Evaluation through user participation, Choosing an evaluation method. Universal design principles, Multi- modal interaction, Designing for diversity.

Unit 5 User Support and Communication and collaborative models 11

User Support: Requirements of user support, Approaches to user support, Adaptive help systems, Designing user support systems. **Communication and collaborative models:** Face – to – face communication, Conversation, Text –based communication, Group working.

Title of the Course: Transform Techniques

Category: BS

Course Code: 24BMAT61T

Branches: **Computer Science, AI&ML, AI&DA, Programming & Data Science**

Semester: VI Semester

Lecture Hours	Tutorial Hours	Practice Hours	Credits
3	0	0	3

Course Objectives: This course introduces Laplace and Z–transforms and their properties for solving differential and difference equations. It develops skills in inverse transforms and emphasizes applications in engineering and scientific problems. The course enables students to apply transform techniques to simplify and solve initial value problems and discrete systems.

Course Outcomes:

At the end of the course, the student will be able to

1. Compute Laplace transforms using standard properties.
2. *Determine inverse Laplace transforms using standard methods*.
3. *Apply Laplace transforms to solve differential equations*.
4. Evaluate Z–transforms of standard sequences.
5. Solve difference equations using inverse Z–transforms.

Unit 1 Laplace Transform 12

Definition of Laplace Transform, Existence of Laplace Transform, Laplace Transform of standard functions, Linearity property, First shifting theorem, multiplication by t^n, division by t.

Unit 2 Inverse Laplace Transform 12

Definition of Inverse Laplace Transform, Inverse Laplace Transform of standard forms, Inverse Laplace Transform using partial fractions, Convolution theorem (without proof)..

Unit 3 Applications of Laplace Transform 11

Laplace Transform of derivatives, Laplace Transform of integrals, Solution of simple ordinary differential equations, Initial value theorem

Unit 4 Z–Transform 12

Definition of Z–Transform, Z–Transform of standard sequences, Linearity property, Shifting property.

Unit 5 Inverse Z–Transform and Applications 12

Inverse Z–Transform (partial fraction method), Initial value theorem, Solution of simple difference equations.
